

Principles of Political Science by J.M Aruego and Aruego-Torres
Week 3 Assigned Readings (P.1-18)

CHAPTER 1
THE NATURE, SCOPE, AND METHODS OF POLITICAL SCIENCE

Political science defined - Writers on the subject have given various definitions of the term political science. These definitions, however, agree on the fact that political science treats the phenomena of the state in its varied aspects and relationships, in short, that it begins and ends with the state.

Among writers, a distinction has often been made between the term "theoretical" politics and the term "applied" or "practical" politics. Of them have been Jellinek, Holtzendorff, Janet, Cornewall Lewis, Alexander Bain, and Sir Frederick Pollock. The first-a majority of writers at present use the term political science instead-is concerned "with the fundamental characteristics of the state without reference to its activities or the means by which its ends are attained," the second-they use at present the term politics-"with the state in action, that is, as a dynamic institutions."

Political science as a science - Although there have been writers who objected to calling the study of the phenomena of the state a science, because political phenomena are characterized by uncertainty, variableness, and a lack of order and continuity, the majority of writers consider it a science because it represents a mass of knowledge about the phenomena of the state, acquired by systematic observation, experience, and study. Holtzendorff, a German writer, writing in defense of the claim that said study is a science says: "With the enormous growth of knowledge, it is impossible to deny that the sum total of all the experiences, phenomena, and knowledge respecting the state may be brought together under the collective title of political science." This has likewise been the view of Bluntschli, Jellinek, Treitschke, Sidgwick, Lieber, Burgess, and Willoughby, and others who have written systematically on the state.

The scope of political science - In its restricted sense, the term political science is applied to the specialized study of government and politics. It is a study of the nature of the state, of the nature, history and forms of political institutions, of the laws of political growth and development, and, generally speaking, of the problems of the state. Accordingly, the study of political science has come to be grouped into the following divisions: (1) courses in political theory, in which an attempt is made to trace the origin and to follow the development and spread of political theories, (2) courses in descriptive and comparative government in which are presented the historical setting and an analysis of the structure and workings of various leading governmental systems of the world, (3) courses in public law,
