While there is a lot to be said for suggesting that a single gene might be responsible for all of the observed differences between the two groups, this is a simple and unlikely case of genetic transmission. Furthermore, the more the genetic picture is filled in, the more likely it is that the two groups will be found to differ in many other ways, beyond the single gene. The more the genetic picture is filled in, the more likely it is that the two groups will be found to differ in many other ways, beyond the single gene.
