Rice Chemistry And Technology:

Rice Jinsong Bao, 2018-11-05 Rice Chemistry and Technology Fourth Edition is a new fully revised update on the very popular previous edition published by the AACC International Press. The book covers rice growth, development, breeding, grain structure, phylogenetics, rice starch, proteins, and lipids. Additional sections cover rice as a food product, health aspects, and quality analysis from a cooking and sensory science perspective. Final chapters discuss advances in the technology of rice with extensive coverage of post-harvest technology, biotechnology, and genomic research for rice grain quality. With a new internationally recognized editor, this new edition will be of interest to academics researching all aspects of rice from breeding to usage. The book is essential reading for those tasked with the development of new products. It identifies the nutrition and health benefits of rice, covers the growing and harvesting of rice crops, includes the use of rice and byproducts beyond food staple, explains rice chemistries including sections on starch, protein, and lipids, and contains contributions from a world-leading editorial team who bring together experts from across the field. Carena, 2009-04-21 Agriculture depends on improved cultivars and cultivars are developed through proper plant breeding. Unfortunately, applied plant breeding programs that are focused on cereal commodity crops are under serious erosion because of lack of funding. This loss of public support affects breeding continuity, objectivity, and perhaps equally important, the training of future plant breeders and the utilization and improvement of plant genetic resources currently available. Breeding programs should focus not only on short-term research goals but also on long-term genetic improvement of germplasm. The research products of breeding programs are important not only for food security but also for commodity-oriented public and private programs, especially in the fringes of crop production. Breeding strategies used for long-term selection are often neglected, but the reality is that long-term research is needed for the success of short-term products. An excellent example is that genetically broad-based public germplasm has significantly been utilized and recycled by industry, producing billions of dollars for industry and farmers before intellectual property rights were available. Successful examples of breeding continuity have served the sustainable cereal crop production that we currently have. The fact that farmers rely on public and private breeding institutions for solving long-term challenges should influence policy makers to reverse this trend of reduced funding. Joint cooperation between industry and public institutions would be a good example to follow. The objective of this volume is to increase the utilization of useful genetic resources and increase awareness of the relative value and impact of plant breeding and biotechnology. That should lead to a more sustainable crop production and ultimately food security. Applied plant breeding will continue to be the foundation to which molecular markers are applied. Focusing useful

molecular techniques on the right traits will build a strong linkage between genomics and plant breeding and lead to new and better cultivars Therefore more than ever there is a need for better communication and cooperation among scientists in the plant breeding and biotechnology areas We have an opportunity to greatly enhance agricultural production by applying the results of this research to meet the growing demands for food security and environmental conservation Ensuring strong applied plant breeding programs with successful application of molecular markers will be essential in ensuring such sustainable use of plant genetic resources
