ICT for

Health, Accessibility and Wellbeing Edwige Pissaloux, George Angelos Papadopoulos, Achilleas Achilleos, Ramiro Velázquez, 2022-03-05 This book constitutes selected papers presented at the First International Conference on ICT for Health Accessibility and Wellbeing IHAW 2021 held in Larnaca Cyprus in November 2021 The 12 full papers and 7 short papers were thoroughly reviewed and selected from 36 submissions One invited paper was also included in this volume The papers are organized in topical sections on active aging assistive devices and systems brain functions support and mHealth brain functions support and oncology ICT and wellbeing Practical Biostatistics in Translational Healthcare Allen M. Khakshooy, Francesco Chiappelli, 2018-06-23 There is an ever increasing emphasis on evidence based medicine that is distinguished by systematic crafting of the patient centered research question detailed literature searches and careful appraisal of the resulting evidence The consensus that ultimately emerges must then be applied in specific clinical settings and it is to this process that translational effectiveness analysis refers This portable and easy to use handbook is intended as a practical teaching guide on translational effectiveness for students and clinicians Specifically it will serve as a primer on patient centered outcomes research methodology in the health sciences and explain how to acquire and understand the fundamental data that determine which reports are valued as the best available evidence It presents an accessible and readily intelligible set of principles which doctors dentists nurses and insurance carriers will be able to use in the process of health care related decision making **Making Medical Knowledge** Miriam Solomon, 2015-04-02 How is medical knowledge made New methods for research and clinical care have reshaped the practices of medical knowledge production over the last forty years Consensus conferences evidence based medicine translational medicine and narrative medicine are among the most prominent new methods Making Medical Knowledge explores their origins and aims their epistemic strengths and their epistemic weaknesses Miriam Solomon argues that the familiar dichotomy between the art and the science of medicine is not adequate for understanding this plurality of methods The book begins by tracing the development of medical consensus conferences from their beginning at the United States National Institutes of Health in 1977 to their widespread adoption in national and international contexts It discusses consensus conferences as social epistemic institutions designed to embody democracy and achieve objectivity Evidence based medicine which developed next ranks expert consensus at the bottom of the evidence hierarchy thus challenging the authority of consensus conferences Evidence based medicine has transformed both medical research and clinical medicine in many positive ways but it has also been accused of creating an intellectual hegemony that has marginalized crucial stages of scientific research particularly scientific discovery Translational medicine is understood as a response to the shortfalls of both consensus conferences and evidence based medicine Narrative medicine is the most prominent recent development in the medical humanities Its central claim is that attention to narrative is essential for patient care Solomon argues that the differences between narrative medicine and the other methods have been exaggerated and offers a pluralistic account of how the all the methods interact and sometimes

conflict The result is both practical and theoretical suggestions for how to improve medical knowledge and understand medical controversies
