Nonlinear Phenomena in Flows of Viscoelastic Polymer Fluids A.I. Leonov,A.N. Prokunin,2012-12-06 This monograph presents theoretical and experimental studies of flows of elastic liquids Falling into this category are particularly the melts and concentrated solutions of such flexible chain polymers as polyethylene polyisobutylene and polypropylene all of which are widely used in polymer processing These polydisperse polymers vary greatly from batch to batch in their mechanical properties and 20% variation in a property is believed to be good enough l 7 All recent books devoted to the rheology of polymers do not answer the question of which constitutive equations should be used for solving the fluid mechanic problems of polymer processing in the usual case of an appreciable nonlinear region of deformation where nonlinear effects of shear and extensional elasticity are very important Viscoelastic constitut ive equations cited commonly see e g Refs 5 and 6 do not describe simultaneously even the simplest cases of deformations viz simple shear and uniaxial extension Moreover some of them are internally inconsist ent and sometimes display highly unstable behaviour in simple flows without any fundamental reasons Even more respected

Rheology and Processing of

Polymeric Materials Chang Dae Han, 2007-05-16 Volume 1 presents first fundamental principles of the rheology of polymeric fluid including kinematics and stresses of a deformable body the continuum theory for the viscoelasticity of flexible homogeneous polymeric liquids the molecular theory for the viscoelasticity of flexible homogeneous polymeric liquids and the experimental methods for the measurement of the rheological properties of polymeric liquids. The materials presented are intended to set a stage for the subsequent chapters by introducing the basic concepts and principles of rheology from both phenomenological and molecular perspectives of structurally simple flexible and homogeneous polymeric liquids. Next this volume presents the rheological behavior of structurally complex polymeric materials including miscible polymer blends block copolymers liquid crystalline polymers thermoplastic polyurethanes immiscible polymer blends particulate filled polymers organoclay nanocomposites molten polymers with dissolved gas and thermosts.

Rheology for Polymer Melt

Processing J.-M. Piau, J.-F. Agassant, 1996-10-10 This book presents the main results obtained by different laboratories involved in the research group Rheology for polymer melt processing which is associated with French universities schools of engineering and the CNRS Centre National de la Recherche Scientifique France. The group comprises some 15 research laboratories of varied disciplines chemistry physics material sciences mechanics mathematics but with a common challenge viz to enhance the understanding of the relationships between macromolecular species their rheology and their processing. Some crucial issues of polymer science have been addressed correlation of viscoelastic macroscopic bulk property measurements and models slip at the wall extrusion defects correlation between numerical flow simulations and experiments. Features of the book The book is unique in that it allows one to grasp the key issues in polymer rheology and processing at once through a series of detailed state of the art contributions which were previously scattered throughout the literature. Each paper was reviewed by experts and the book editors and some coordination was established in order to achieve a readable and easy access style. Papers have been grouped in sections covering successively Molecular dynamics Constitutive

equations and numerical modelling Simple and complex flows Each paper can be read independently Since the book is intended as an introduction to the main topics in polymer processing it will be of interest to graduate students as well as to scientists in academic and industrial laboratories
