Multiple Into One:

One-Volume Libraries: Composite and Multiple-Text Manuscripts Michael Friedrich, Cosima Schwarke, 2016-11-07

Composite and multiple text manuscripts are traditionally studied for their individual texts but recent trends in codicology have paved the way for a more comprehensive approach. Manuscripts are unique artefacts which reveal how they were produced and used as physical objects. While multiple text manuscripts codicologically are to be considered as production units i.e. they were originally planned and realized in order to carry more than one text, composites consist of formerly independent codicological units and were put together at a later stage with intentions that might be completely different from those of its original parts. Both sub types of manuscripts are still sometimes called miscellanies, a term relating to the texts only. The codicological difference is important for reconstructing why and how these manuscripts, which in many cases resemble or contain a small library, were produced and used. Contributions on the manuscript cultures of China, India, Africa, the Islamic world and European traditions lead not only to the conclusion that one volume libraries have been produced in many manuscript cultures but allow also for the identification of certain types of uses.

Symmetries and Group Theory in Particle Physics Giovanni Costa, Gianluigi Fogli, 2012-02-03. Symmetries coupled with the mathematical concept of group theory are an essential conceptual backbone in the formulation of quantum field theories capable of describing the world of elementary particles. This primer is an introduction to and survey of the underlying concepts and structures needed in order to understand and handle these powerful tools. Specifically in Part I of the book the symmetries and related group theoretical structures of the Minkowskian space time manifold are analyzed while Part II examines the internal symmetries and their related unitary groups where the interactions between fundamental particles are encoded as we know them from the present standard model of particle physics. This book, based on several courses given by the authors, addresses advanced graduate students and non specialist researchers wishing to enter active research in the field and having a working knowledge of classical field theory and relativistic quantum mechanics. Numerous end of chapter problems and their solutions will facilitate the use of this book as self study guide or as course book for topical lectures.

From Many Gods to One Tobias Gregory, 2024-05-31. Epic poets of the Renaissance looked to emulate the poems of Greco Roman antiquity but doing so presented a dilemma: what to do about the gods. Divine intervention plays a major part in the epics of Homer and Virgil; indeed quarrels within the family of Olympian gods are essential to the narrative structure of those poems. Yet poets of the Renaissance recognized that the cantankerous Olympians could not be imitated too closely. The divine action of their classical models had to be transformed to accord with contemporary tastes and Christian belief. *From Many Gods to One* offers the first comparative study of poetic approaches to the problem of epic divine action. Through readings of Petrarch, Vida, Ariosto, Tasso and Milton, Tobias Gregory describes the narrative and ideological consequences of the epic's turn from pagan to Christian. Drawing on scholarship in several disciplines: religious studies, classics, history and philosophy as well as literature.

From Many Gods to One sheds new light on two subjects of enduring importance in Renaissance studies the precarious balance between classical literary models and Christian religious norms and the role of religion in drawing lines between allies and others

Front-End Vision and Multi-Scale Image Analysis Bart M. Haar Romeny,2008-10-24 Many approaches have been proposed to solve the problem of finding the optic flow field of an image sequence Three major classes of optic flow computation techniques can be discriminated see for a good overview Beauchemin and Barron IBeauchemin19951 gradient based or differential methods phase based or frequency domain methods correlation based or area methods feature point or sparse data tracking methods In this chapter we compute the optic flow as a dense optic flow field with a multi scale differential method The method originally proposed by Florack and Nielsen Florack1998a is known as the Multiscale Optic Flow Constrain Equation MOFCE This is a scale space version of the well known computer vision implementation of the optic flow constraint equation as originally proposed by Horn and Schunck Horn1981 This scale space variation as usual consists of the introduction of the aperture of the observation in the process The application to stereo has been described by Maas et al Maas 1995a Maas 1996a Of course difficulties arise when structure emerges or disappears such as with occlusion cloud formation etc Then knowledge is needed about the processes and objects involved In this chapter we focus on the scale space approach to the local measurement of optic flow as we may expect the visual front end to do
