Riemann Surfaces Sheaf Theory Riemann Surfaces Automorphic Forms:

Riemann Surfaces Eberhard Freitag, 2014-09-22 The book contains an introduction into the theory of Riemann surfaces using a sheaf theoretic approach Sheaf theory is developed completely The cohomology of sheaves is introduced by means of the canonical flabby resolution of Godement The Riemann Roch theorem is proved for vector bundles Abel's theorem and the Jacobi inversion theorem are treated As application dimension formulae for vector valued automorphic forms in one variable are proved The necessary tools from topology and algebra are described completely but highly focussed Riemann Surfaces and Generalized Theta Functions Robert C. Gunning, 2012-12-06 The investigation of the relationships between compact Riemann surfaces algebraic curves and their associated complex tori Jacobi varieties has long been basic to the study both of Riemann surfaces and of complex tori A Riemann surface is naturally imbedded as an analytic submanifold in its associated torus and various spaces of linear equivalence classes of divisors on the surface or equivalently spaces of analytic equivalence classes of complex line bundles over the surface classified according to the dimensions of the associated linear series or the dimensions of the spaces of analytic cross sections are naturally realized as analytic subvarieties of the associated torus One of the most fruitful of the classical approaches to this investigation has been by way of theta functions The space of linear equivalence classes of positive divisors of order $g-1$ on a compact connected Riemann surface M of genus g is realized by an irreducible $g-1$ dimensional analytic subvariety an irreducible hypersurface of the associated g dimensional complex torus $J(M)$ this hyperplane $W_{g-1}(M)$ is the image of the natural mapping $M \rightarrow J(M)$ and is $g-1$ birationally equivalent to the $g-1$ fold symmetric product $M^{(g-1)}$ of the Riemann surface M Sheaf Theory Glen E. Bredon, 2012-12-06 This book is primarily concerned with the study of cohomology theories of general topological spaces with general coefficient systems Sheaves play several roles in this study For example they provide a suitable notion of general coefficient systems Moreover they furnish us with a common method of defining various cohomology theories and of comparison between different cohomology theories The parts of the theory of sheaves covered here are those areas important to algebraic topology Sheaf theory is also important in other fields of mathematics notably algebraic geometry but that is outside the scope of the present book Thus a more descriptive title for this book might have been Algebraic Topology from the Point of View of Sheaf Theory Several innovations will be found in this book Notably the concept of the tautness of a subspace an adaptation of an analogous notion of Spanier to sheaf theoretic cohomology is introduced and exploited throughout the book The fact that sheaf theoretic cohomology satisfies the homotopy property is proved for general topological spaces Also relative cohomology is introduced into sheaf theory Concerning relative cohomology it should be noted that sheaf theoretic cohomology is usually considered as a single space theory L-Functions and Automorphic Forms Jan Hendrik Bruinier, Winfried Kohnen, 2018-02-22 This book presents a collection of carefully refereed research articles and lecture notes stemming from the Conference Automorphic Forms and L Functions held at the University of Heidelberg in

2016 The theory of automorphic forms and their associated L functions is one of the central research areas in modern number theory linking number theory arithmetic geometry representation theory and complex analysis in many profound ways The 19 papers cover a wide range of topics within the scope of the conference including automorphic L functions and their special values p adic modular forms Eisenstein series Borchers products automorphic periods and many more

Differential Geometry and Complex Analysis I. Chavel, H.M. Farkas, 2012-12-06 This volume is dedicated to the memory of Harry Ernest Rauch who died suddenly on June 18 1979 In organizing the volume we solicited i articles summarizing Rauch's own work in differential geometry complex analysis and theta functions ii articles which would give the reader an idea of the depth and breadth of Rauch's researches interests and influence in the fields he investigated and iii articles of high scientific quality which would be of general interest In each of the areas to which Rauch made significant contribution pinching theorems teichmüller theory and theta functions as they apply to Riemann surfaces there has been substantial progress Our hope is that the volume conveys the originality of Rauch's own work the continuing vitality of the fields he influenced and the enduring respect for and tribute to him and his accomplishments in the mathematical community Finally it is a pleasure to thank the Department of Mathematics of the Graduate School of the City University of New York for their logistical support James Rauch who helped us with the biography and Springer Verlag for all their efforts in producing this volume Isaac Chavel Hershel M Farkas Contents Harry Ernest Rauch Biographical Sketch VII Bibliography of the Publications of H E Rauch X Ph D Theses Written under the Supervision of H E Rauch XIII H E Rauch Geometre Differentiel by M Berger

Current Algebras on Riemann Surfaces Oleg K. Sheinman, 2012-10-01 This monograph is an introduction into a new and fast developing field on the crossroads of infinite dimensional Lie algebra theory and contemporary mathematical physics It contains a self consistent presentation of the theory of Krichever Novikov algebras Lax operator algebras their interaction representation theory relations to moduli spaces of Riemann surfaces and holomorphic vector bundles on them to Lax integrable systems and conformal field theory For beginners the book provides a short way to join in the investigations in these fields For experts it sums up the recent advances in the theory of almost graded infinite dimensional Lie algebras and their applications The book may serve as a base for semester lecture courses on finite dimensional integrable systems conformal field theory almost graded Lie algebras Majority of results are presented for the first time in the form of monograph An Introduction to Riemann Surfaces, Algebraic Curves and Moduli Spaces Martin

Schlichenmaier, 2010-02-11 This book gives an introduction to modern geometry Starting from an elementary level the author develops deep geometrical concepts that play an important role in contemporary theoretical physics presenting various techniques and viewpoints along the way This second edition contains two additional more advanced geometric techniques the modern language and modern view of Algebraic Geometry and Mirror Symmetry Computational Aspects of Modular Forms and Galois Representations Bas Edixhoven, Jean-Marc Couveignes, 2011-05-31 Modular forms are tremendously

important in various areas of mathematics from number theory and algebraic geometry to combinatorics and lattices Their Fourier coefficients with Ramanujan's τ function as a typical example have deep arithmetic significance Prior to this book the fastest known algorithms for computing these Fourier coefficients took exponential time except in some special cases The case of elliptic curves Schoof's algorithm was at the birth of elliptic curve cryptography around 1985 This book gives an algorithm for computing coefficients of modular forms of level one in polynomial time For example Ramanujan's τ of a prime number p can be computed in time bounded by a fixed power of the logarithm of p Such fast computation of Fourier coefficients is itself based on the main result of the book the computation in polynomial time of Galois representations over finite fields attached to modular forms by the Langlands program Because these Galois representations typically have a nonsolvable image this result is a major step forward from explicit class field theory and it could be described as the start of the explicit Langlands program The computation of the Galois representations uses their realization following Shimura and Deligne in the torsion subgroup of Jacobian varieties of modular curves The main challenge is then to perform the necessary computations in time polynomial in the dimension of these highly nonlinear algebraic varieties Exact computations involving systems of polynomial equations in many variables take exponential time This is avoided by numerical approximations with a precision that suffices to derive exact results from them Bounds for the required precision in other words bounds for the height of the rational numbers that describe the Galois representation to be computed are obtained from Arakelov theory Two types of approximations are treated one using complex uniformization and another one using geometry over finite fields The book begins with a concise and concrete introduction that makes it accessible to readers without an extensive background in arithmetic geometry And the book includes a chapter that describes actual computations Riemann Surfaces Simon Donaldson, 2011-03-24 An authoritative but accessible text on one dimensional complex manifolds or Riemann surfaces Dealing with the main results on Riemann surfaces from a variety of points of view it pulls together material from global analysis topology and algebraic geometry and covers the essential mathematical methods and tools

Hilbert Modular Forms and Iwasawa Theory Haruzo Hida, 2006-06-15 The 1995 work of Wiles and Taylor Wiles opened up a whole new technique in algebraic number theory and a decade on the waves caused by this incredibly important work are still being felt This book authored by a leading researcher describes the striking applications that have been found for this technique In the book the deformation theoretic techniques of Wiles Taylor are first generalized to Hilbert modular forms following Fujiwara's treatment and some applications found by the author are then discussed With many exercises and open questions given this text is ideal for researchers and graduate students entering this research area
