Secure AI Onboarding Framework Michael Bergman,2024-08-22 AI Onboarding is the process of fine tuning generic pre trained AI models using the transfer learning process and the organisation s proprietary data such as intellectual property IP customer data and other domain specific datasets This fine tuning transforms a generic AI model into a bespoke business tool that understands organisation specific terminology makes decisions in line with internal policies and strategies and provides insights that are directly relevant to the organisation s goals and challenges Standing in the way of this powerful transformation is the AI onboarding challenge of protecting the confidentiality integrity and availability of proprietary data as it is collected stored processed and used in fine tuning The

Secure AI Onboarding Framework is designed to address this challenge by supporting the Risk Identification and Risk treatment phases of ISO IEC 27005. It decomposes authoritative resources including the AI Act, OWASP, NIST CSF 2.0 and AI RMF into four critical components: namely Risks, Security Controls, Assessment Questions, and Control Implementation Guidance. These components help organisations first to identify the risks relevant to their AI system and proprietary data, second define an AI system statement of applicable controls to treat the risks, Thirdly assess the implementation status of those controls to identify gaps in their readiness to onboard the AI system, and finally they provide control implementation guidance to facilitate the correct control implementation. Ultimately minimising the security risks related to onboarding AI systems and securely integrating them into their business teams and processes.
