Pulley Systems

- When a rope passes around a pulley, the rope and the tension force change direction. The pulley rotates as the rope moves in either direction.

The tension force at the end of a rope acts in the direction of the end of the rope.

The rope and the tension force change direction around a pulley.

- An ideal pulley is...
 - massless: the pulley has no mass, no inertia and no weight.
 - frictionless: there are no friction forces acting within the pulley and it would rotate freely forever.
- When a rope passes around an ideal pulley, the tension force is still the same at both ends of the rope.
- When a rope passes around a real or non-ideal pulley that has mass, the pulley has rotational inertia and the torque and rotational dynamics of the pulley need to be considered in addition to the other objects involved.
- If a pulley is not frictionless, the mechanical energy of the system (the ropes and other objects) may be lost as thermal energy due to friction.
