Paul Schafer, 2008-04-29 In *Revolution or Renaissance* D Paul Schafer subjects two of the most powerful forces in the world economics and culture to a detailed and historically sensitive analysis He argues that the economic age has produced a great deal of wealth and unleashed tremendous productive power however it is not capable of coming to grips with the problems threatening human and non human life on this planet After tracing the evolution of the economic age from the publication of Adam Smith's *The Wealth of Nations* in 1776 to the present he turns his attention to culture examining it both as a concept and as a reality What emerges is a portrait of the world system of the future where culture is the central focus of development According to Schafer making the transition from an economic age to a cultural age is imperative if global harmony environmental sustainability economic viability and human well being are to be achieved Published in English *Organizing the Green World: A Conceptual*

History of Botanical Classification Tod F. Stuessy, 2025-09-02 This book focuses on plant systematics and evolution with special interest on the history and philosophy of botanical classification Tracing the history of how humans have dealt with ordering the plant world is very much a glimpse of how human culture and science have progressed over the past 2000 years The objective in this book is to present ideas on plant classification beginning with classical Greek and Roman scholars through the Middle Ages into the Renaissance and finally to the modern 21st century Significant quantitative methods in classification have originated within the past 70 years which have never before been integrated with previous historical perspectives Most textbooks of systematic botany contain an historical introduction or perhaps a chapter on the history of classification but this book presents much greater detail on the classifications themselves and the cultural dimensions of the different time periods Biographical detail is also provided to give a better appreciation of the individual botanists who have contributed new ideas in the search for maximally predictive systems Revolution and Evolution Grace Lee
