Das, 2019-04-15 Now in its fifth edition this classic textbook continues to offer a well tailored resource for beginning graduate students in geotechnical engineering Further developing the basic concepts from undergraduate study it provides a solid foundation for advanced study This new edition addresses a variety of recent advances in the field and each section is updated Braja Das particularly expands the content on consolidation shear strength of soils and both elastic and consolidation settlements of shallow foundations to accommodate modern developments New material includes Recently published correlations of maximum dry density and optimum moisture content of compaction Recent methods for determination of preconsolidation pressure A new correlation for recompression index Different approaches to estimating the degree of consolidation A discussion on the relevance of laboratory strength tests to field conditions Several new example problems This text can be followed by advanced courses dedicated to topics such as mechanical and chemical stabilization of soils geo environmental engineering critical state soil mechanics geosynthetics rock mechanics and earthquake engineering It can also be used as a reference by practical consultants

Foundation Engineering Handbook Hsai-Yang Fang, 2013-06-29 More than ten years have passed since the first edition was published During that period there have been a substantial number of changes in geotechnical engineering especially in the applications of foundation engineering As the world population increases more land is needed and many soil deposits previously deemed unsuitable for residential housing or other construction projects are now being used Such areas include problematic soil regions mining subsidence areas and sanitary landfills To overcome the problems associated with these natural or man made soil deposits new and improved methods of analysis design and implementation are needed in foundation construction As society develops and living standards rise tall buildings transportation facilities and industrial complexes are increasingly being built Because of the

heavy design loads and the complicated environments the traditional design concepts construction materials methods and equipment also need improvement Further recent energy and material shortages have caused additional burdens on the engineering profession and brought about the need to seek alternative or cost saving methods for foundation design and construction Civil and Environmental Engineering for Resilient, Smart and Sustainable Solutions Tahar
