Problems Of Vision Rethinking The Causal Theory Of Perception:

Problems of Vision Gerald Vision, 1999 Problems of Vision Gerald Vision, 1997-01-09 In this book Gerald Vision argues for a new causal theory one that engages provocatively with direct realism and makes no use of a now discredited subjectivism

Philosophy of Perception William Fish, 2010-05-07 The philosophy of perception investigates the nature of our sensory experiences and their relation to reality Raising questions about the conscious character of perceptual experiences how they enable us to acquire knowledge of the world in which we live and what exactly it is we are aware of when we hallucinate or dream the philosophy of perception is a growing area of interest in metaphysics epistemology and philosophy of mind William Fish s *Philosophy of Perception* introduces the subject thematically setting out the major theories of perception together with their motivations and attendant problems While providing historical background to debates in the field this comprehensive overview focuses on recent presentations and defenses of the different theories and looks beyond visual perception to take into account the role of other senses Topics covered include the phenomenal principle perception and hallucination perception and content sense data adverbialism and idealism disjunctivism and relationalism intentionalism and combined theories the nature of content veridicality perception and empirical science non visual perception With summaries and suggested further reading at the end of each chapter this is an ideal introduction to the philosophy of perception

Perception, Hallucination, and Illusion William Fish, 2009-04-07 In this book the author develops a comprehensive disjunctive theory incorporating detailed accounts of the three core kinds of visual experience perception hallucination and illusion and an explanation of how perception and hallucination could be indiscriminable from one another without having anything in common

Computational Intelligence in Archaeology Barcelo, Juan A., 2008-07-31 Provides analytical theories offered by innovative artificial intelligence computing methods in the archaeological domain

Disjunctivism Marcus Willaschek, 2013-09-13 Does perception provide us with direct and unmediated access to the world around us The so called argument from illusion has traditionally been supposed to show otherwise from the subject s point of view perceptual illusions are often indistinguishable from veridical perceptions hence perceptual experience as such cannot provide us with knowledge of the world but only with knowledge of how things appear to us Disjunctive accounts of perceptual experience first proposed by John McDowell and Paul Snowdon in the early 1980s and at the centre of current debates in the philosophy of perception have been proposed to block this argument According to the traditional view a case of perception and a subjectively indistinguishable illusion or hallucination can exemplify what is fundamentally the same kind of mental state even though they differ in how they relate to the non mental environment In contrast according to the disjunctive account the concept of perceptual experience should be seen as essentially disjunctive encompassing at least two distinct kinds of mental states namely genuinely world involving perceptions and mere appearances This book presents seven recent essays on disjunctivism first published in two special issues of *Philosophical Explorations* An International Journal for

the Philosophy of Mind and Action The Autonomy of Reference Zoltán Vecsey, 2024-09-11 In *The Autonomy of Reference* On the Relational Structure of Nominals Zoltán Vecsey defends a moderate autonomy thesis concerning the explanatory status of nominal reference. The autonomy thesis is based on the observation that the relational term of reference exhibits a specific resistance to systematizing attempts. The resistance can be observed on two complementary fronts. On the one hand, reference cannot be introduced into the vocabulary of theoretical linguistics in a de novo manner because every reasonable introductory technique must be built on such expressions that are already functioning in a relational mode. On the other hand, and for similar reasons, the term cannot simply be removed from the vocabulary of theoretical linguistics because every reasonable technique of removal must be built on expressions that are still functioning in a relational mode. Although reference is an autonomous aspect of meaning in that it shows resistance to these attempts of systematisation, it should not be banished from linguistic theory as an unscientific phenomenon. Vecsey argues that the explanatory technique of reverse engineering, which has already been effectively used in the research practices of logic and mathematics, brings theoretical legitimacy to the term of reference.

Visual Phenomenology Michael Madary, 2023-12-05 Phenomenological and empirical methods of investigating visual experience converge to support the thesis that visual perception is an ongoing process of anticipation and fulfillment. In this book, Michael Madary examines visual experience drawing on both phenomenological and empirical methods of investigation. He finds that these two approaches, careful philosophical description of experience and the science of vision, independently converge on the same result: Visual perception is an ongoing process of anticipation and fulfillment. Madary first makes the case for the descriptive premise, arguing that the phenomenology of vision is best described as an ongoing process of anticipation and fulfillment. He discusses visual experience as being perspectival, temporal, and indeterminate, considers the possibility of surprise when appearances do not change as we expect, and considers the content of visual anticipation. Madary then makes the case for the empirical premise, showing that there are strong empirical reasons to model vision using the general form of anticipation and fulfillment. He presents a range of evidence from perceptual psychology and neuroscience and reinterprets evidence for the two visual systems hypothesis. Finally, he considers the relationship between visual perception and social cognition. An appendix discusses Husserlian phenomenology as it relates to the argument of the book. Madary argues that the fact that there is a convergence of historically distinct methodologies itself is an argument that supports his findings. With *Visual Phenomenology*, he creates an exchange between the humanities and the sciences that takes both methods of investigation seriously.

The Philosophical Review, 1999

The Metaphysics of Memory Sven Bernecker, 2008-05-08 This book investigates central issues in the philosophy of memory and is the first book on the metaphysics of memory in four decades. It defends a version of the causal theory of memory and argues for direct realism about memory.
