Air Quality Management in the United States National Research Council, Division on Earth and Life Studies, Board on Atmospheric Sciences and Climate, Board on Environmental Studies and Toxicology, Committee on Air Quality Management in the United States, 2004-09-30 Managing the nation's air quality is a complex undertaking involving tens of thousands of people in regulating thousands of pollution sources. The authors identify what has worked and what has not and they offer wide ranging recommendations for setting future priorities making difficult choices and increasing innovation. This new book explores how to better integrate scientific advances and new technologies into the air quality management system. The volume reviews the three decade history of governmental efforts toward cleaner air discussing how air quality standards are set and results measured the design and implementation of control strategies regulatory processes and procedures special issues with mobile pollution sources and more. The book looks at efforts to spur social and behavioral changes that affect air quality the effectiveness of market based instruments for air quality regulation and many other aspects of the issue. Rich in technical detail this book will be of interest to all those engaged in air quality management scientists engineers industrial managers law makers regulators health officials clean air advocates and concerned citizens.

Air Quality Management and Research in Southeast Asia Erik Velasco, Armando Retama, Dimitris Stratoulas, 2024-12-01 This book examines the capabilities for monitoring air quality developing emission inventories and running chemical transport models for regulatory forecasting and research purposes in Southeast Asia. It also reviews scientific efforts made to better understand and characterize air pollution in the region. Poor air quality poses a threat to public health. It affects people's lives and undermines economic growth but as in many other parts of the world it has been overlooked in Southeast Asia. International assessments suggest that it is the culprit of 335 thousand premature deaths in the region each year entailing a monetary cost equivalent to 6.75% of the regional GDP. Reducing air pollution requires concerted efforts from all Southeast Asian nations to implement local and regional air quality policies following a science policy approach. For such endeavor it is essential to develop tools that enable timely and reliable air quality management. This entails collecting data to characterize the magnitude origin and impact of air pollution to support corrective actions. The objective of this book is to provide a starting point for a science based conversation about implementing solutions to Southeast Asia's air pollution problem by bringing together an analysis of the availability of air quality data and studies from across the region.

Air Quality Guidelines World Health Organization. Regional Office for Europe, World Health Organization, 2006 This book presents revised guideline values for the four most common air pollutants particulate matter ozone nitrogen dioxide and sulfur dioxide based on a recent review of the accumulated scientific evidence. The rationale for selection of each guideline value is supported by a synthesis of information emerging from research on the health effects of each pollutant. As a result these guidelines now also apply globally. They can be read in conjunction with Air quality guidelines for Europe 2nd edition which is still the authority on guideline values for all other air pollutants. As well as revised guideline values this book makes a brief yet comprehensive

review of the issues affecting the application of the guidelines in risk assessment and policy development Further it summarizes information on pollution sources and levels in various parts of the world population exposure and characteristics affecting sensitivity to pollution methods for quantifying the health burden of air pollution and the use of guidelines in developing air quality standards and other policy tools Finally the special case of indoor air pollution is explored Prepared by a large team of renowned international experts who considered conditions in various parts of the globe these guidelines are applicable throughout the world They provide reliable guidance for policy makers everywhere when considering the various options for air quality management
