Probability, Geometry and Integrable Systems Mark Pinsky, Bjorn Birnir, 2008-03-17 Reflects the range of mathematical interests of Henry McKean to whom it is dedicated **Random Matrix Theory, Interacting Particle Systems and Integrable Systems** Percy Deift, Peter Forrester, 2014-12-15 This volume includes review articles and research contributions on long standing questions on universalities of Wigner matrices and beta ensembles Commutative Algebra and Noncommutative Algebraic Geometry David Eisenbud, Srikanth B. Iyengar, Anurag K. Singh, J. Toby Stafford, Michel Van den Bergh, 2015-11-19 This book surveys fundamental current topics in these two areas of research emphasising the lively interaction between them Volume 1 contains expository papers ideal for those entering the field Noncommutative Algebraic Geometry Gwyn Bellamy, Daniel Rogalski, Travis Schedler, J. Toby Stafford, Michael Wemyss, 2016-06-20 This book provides a comprehensive introduction to the interactions between noncommutative algebra and classical algebraic geometry

Approximation Methods and Analytical Modeling Using Partial Differential Equations Tamara Fastovska, Yuri Kolomoitsev, Kateryna Buryachenko, Marina Chugunova, 2025-03-28 Adequate mathematical modeling is the key to success for many real world projects in engineering medicine and other applied areas As soon as an appropriate mathematical model is developed it can be comprehensively analyzed by a broad spectrum of available mathematical methods For example compartmental models are widely used in mathematical epidemiology to describe the dynamics of infectious diseases and in mathematical models of population genetics While the existence of an optimal solution under certain condition can be often proved rigorously this does not always mean that such a solution is easy to implement in practice Finding a reasonable approximation can in itself be a challenging research problem This Research Topic is devoted to modeling analysis and approximation problems whose solutions exploit and explore the theory of partial differential equations It aims to highlight new analytical tools for use in the modeling of problems arising in applied sciences and practical areas Researchers are invited to submit articles that investigate the qualitative behavior of weak solutions removability conditions for singularities the dependence of the local asymptotic property of these solutions on initial and boundary data and also the existence of solutions Contributors are particularly encouraged to focus on anisotropic models analyzing the preconditions on the strength of the anisotropy and comparing the analytical estimates for the growth behavior of the solutions near the singularities with the observed growth in numerical simulations The qualitative analysis and analytical results should be confirmed by the numerically observed solution behavior **Special Functions and Orthogonal Polynomials** Diego Dominici, Robert Sullivan Maier, 2008 This volume contains fourteen articles that represent the AMS Special Session on Special Functions and Orthogonal Polynomials held in Tucson Arizona in April of 2007 It gives an overview of the modern field of special functions with all major subfields represented including applications to algebraic geometry asymptotic analysis conformal mapping differential equations elliptic functions fractional calculus hypergeometric and q hypergeometric

series nonlinear waves number theory symbolic and numerical evaluation of integrals and theta functions A few articles are expository with extensive bibliographies but all contain original research This book is intended for pure and applied mathematicians who are interested in recent developments in the theory of special functions It covers a wide range of active areas of research and demonstrates the vitality of the field **BOOK JACKET** **Current Developments in Algebraic**

Geometry Lucia Caporaso,2012-03-19 This volume based on a workshop by the MSRI offers an overview of the state of the art in many areas of algebraic geometry **Topology of Stratified Spaces** Greg Friedman,2011-03-28 This book explores the study of singular spaces using techniques from areas within geometry and topology and the interactions among them

Sojourns in Probability Theory and Statistical Physics - I Vlas Sidoravicius,2019-10-17 Charles M Chuck Newman has been a leader in Probability Theory and Statistical Physics for nearly half a century This three volume set is a celebration of the far reaching scientific impact of his work It consists of articles by Chuck s collaborators and colleagues across a number of the fields to which he has made contributions of fundamental significance This publication was conceived during a conference in 2016 at NYU Shanghai that coincided with Chuck s 70th birthday The sub titles of the three volumes are I Spin Glasses and Statistical Mechanics II Brownian Web and Percolation III Interacting Particle Systems and Random Walks The articles in these volumes which cover a wide spectrum of topics will be especially useful for graduate students and researchers who seek initiation and inspiration in Probability Theory and Statistical Physics **Stable Categories and**

Structured Ring Spectra Andrew J. Blumberg,Teena Gerhardt,Michael A. Hill,2022-07-21 A graduate level introduction to the homotopical technology in use at the forefront of modern algebraic topology
