Quantifying the Value of RFID and the EPCglobal Architecture Framework in Logistics Dieter Uckelmann, 2012-04-25 The EPCglobal Architecture Framework is currently the most accepted technical approach to the Internet of Things and provides a solid foundation for building Business to Business information networks based on unique identifications of things Lately the vision of the Internet of Things has been extended to a more holistic approach that integrates sensors as well as actuators and includes non business stakeholders A detailed look at the current state of the art in research concerning cost and benefit estimations is provided and the limits of Cost Benefit Sharing for RFID based IT infrastructures are explained In this work a market driven evaluation based on sales potential of information is developed Simple technical means for aggregation of micro values to a billable amount are discussed The requirements for electronic billing infrastructure are defined and a matching e billing solutions for an evaluation scenario is presented providing a technical infrastructure to evaluate and bill product related information in a future Internet of Things based on an extended EPCglobal Architecture Further opportunities and threats are discussed to provide an overview of its future potential As a result it will contribute to the sustainable success of the Internet of Things itself

RFID technology introduction and impacts on supply chain management systems Roman Christian Rochel, 2005-11-15 Seminar paper from the year 2005 in the subject Business economics Supply Production Logistics grade 1 3 European Business School International University Schlo Reichartshausen Oestrich Winkel Suppply Management Institute course Seminar of Logistics and Business Engineering language English abstract Today s businesses face a dynamic and competitive environment which results in an ever increasing pressure on them to innovate reinvent processes and leverage the potential of supply chain partnerships Current supply chain trends as mentioned by McFarlane and Sheffi include globalization outsourcing stock keeping unit SKU

proliferation and shorter product lifecycles 1 To enable these trends and to master the inherent challenges companies must at all times have information and visibility about shipments products and progress Yet this strongly needed information and visibility is not limited to the internal company supply chain but rather along the entire supply chain from the original supplier to the end customer Thus external supply chain integration on the basis of fine granularity of data has to be one of the primary objectives in today s supply chain management efforts One of the emerging technologies offering a solution for this aim is Radiofrequency Identification RFID RFID can facilitate automating and streamlining identification processes This means more checkpoints along the supply chain can be established at decreased costs However not limited to that purpose the technology offers additional benefits which make it superior to the automatic identification Auto ID technology of the barcode currently in widespread use Nonetheless RFID is only a data collection technology which must be integrated with the supply chain management systems of the companies Furthermore along the supply chain various information systems must be integrated in order to give a meaning to the data and to allow for information exchange Although RFID technology has originally been developed decades ago the industrial use of RFID in large scale supply chain operations has until now been prohibited due to the relatively high costs compared to other Auto ID solutions Recent mandates of large retail companies such as WalMart and Metro Group force suppliers in the position where they have to implement the technology without proper knowledge about it Additionally there are still several technical as well as rather political barriers to be solved This seminar paper deals with RFID technology introduction and impacts on supply chain management systems in order to give an insight into the current issues and status of the technology
