Rice Planthoppers Ecology Management Socio Economics And Policy:

Rice Planthoppers Kong Luen Heong, Jiaan Cheng, Monina M. Escalada, 2014-10-23 The book discusses planthopper pests of rice. These insects are one of the most destructive pests threatening food security around the world. The historical development of the rice planthopper problem shows that they are secondary pests and single discipline control tactics or strategies were not able to manage them and instead caused frequent resurgences. This book not only presents new approaches to this persistent problem but also new ecological methods, new perspectives on the effect of pesticide marketing, insights into developing resistant varieties and structural reforms in pest management. Integrating biological, ecological, economic and sociological aspects, it clearly presents the latest information on newly developed strategies for managing this pest. Dr K L Heong is the principal scientist and insect ecologist at the International Rice Research Institute, Philippines. He has been researching rice planthoppers for more than 30 years. Dr Heong is a fellow of the Third World Academy of Science and the Academy of Sciences, Malaysia. Professor Jia an Cheng is an insect ecologist who has been studying rice planthoppers for about 50 years. He is a professor at Zhejiang University, China. Professor M M Escalada works at Visayas State University.

Rice Production Worldwide Bhagirath S. Chauhan, Khawar Jabran, Gulshan Mahajan, 2017-02-16 This book addresses aspects of rice production in rice growing areas of the world, including origin, history, role in global food security, cropping systems, management practices, production systems, cultivars, as well as fertilizer and pest management. As one of the three most important grain crops that helps to fulfill food needs all across the globe, rice plays a key role in the current and future food security of the world. Currently, no book covers all aspects of rice production in the rice growing areas of the world. This book fills that gap by highlighting the diverse production and management practices, as well as the various rice genotypes in the salient rice producing areas in Asia, Europe, Africa, the Americas, and Australia. Further, this text highlights harvesting, threshing, processing, yields, and rice products and future research needs. Supplemented with illustrations and tables, this text is essential for students taking courses in agronomy and production systems, as well as for agricultural advisers, county agents, extension specialists, and professionals throughout the industry. **Sustainable Agriculture Reviews 31** Eric Lichtfouse, 2018-09-26 This book presents advanced ecological techniques for crop cultivation, and the chapters are arranged into four sections: namely, general aspects, weeds, fungi, worms, and microbes. Biocontrol is an ecological method of controlling pests such as insects, mites, weeds, and plant diseases using other organisms. This practice has been used for centuries. Biocontrol relies on predation, parasitism, herbivory, or other natural mechanisms. Natural enemies of insect pests, also known as biological control agents, include predators, parasitoids, pathogens, and competitors. Plant Diseases and Food Security in the 21st Century Peter Scott, Richard Strange, Lise Korsten, Maria Lodovica Gullino, 2021-05-22 Of the global population of more than 7 billion people, some 800 million do not have enough to eat today. By 2050, the population is expected to exceed 9 billion. It has been estimated that some 15% of food production is lost to plant diseases in developing countries; losses may be

much higher Historically plant diseases have had catastrophic impact on food production For example potato blight caused the Irish famine in 1845 brown spot of rice caused the Great Bengal Famine of 1943 southern corn leaf blight caused a devastating epidemic on the US corn crop in 1970 Food security is threatened by an ongoing sequence of plant diseases some persistent for decades or centuries others more opportunistic Wheat blast and banana xanthomonas wilt are two contrasting examples of many that currently threaten food production Other emerging diseases will follow The proposed title aims to provide a synthesis of expert knowledge to address this central challenge to food security for the 21st century Chapters 5 and 11 are available open access under a Creative Commons Attribution 4.0 International License via link [springer.com](https://www.springer.com)

students researchers and stakeholders alike **Sustaining Global Food Security** Robert Zeigler,2019-10-09 Population growth alone dictates that global food supplies must increase by over 50% in coming decades Advances in technology offer an array of opportunities to meet this demand but history shows that these can be fully realised only within an enabling policy environment Sustaining Global Food Security makes a compelling case that recent technological breakthroughs can move the planet towards a secure and sustainable food supply only if new policies are designed that allow their full expression Bob Zeigler has brought together a distinguished set of scientists and policy analysts to produce well referenced chapters exploring international policies on genetic resources molecular genetics genetic engineering crop breeding and protection remote sensing the changing landscape of agricultural policies in the world s largest countries and trade Those entering the agricultural sciences and those who aspire to influence public policy during their careers will benefit from the insights of this unique set of experiences and perspectives **The Serengeti Rules** Sean B. Carroll,2024-08-20 One of today s most accomplished biologists and gifted storytellers reveals the rules that regulate all life How does life work How does nature produce the right numbers of zebras and lions on the African savanna or fish in the ocean How do our bodies produce the right numbers of cells in our organs and bloodstream In The Serengeti Rules award winning biologist and author Sean Carroll tells the stories of the pioneering scientists who sought the answers to such simple yet profoundly important questions and shows how their discoveries matter for our health and the health of the planet we depend upon One of the most important revelations about the natural world is that everything is regulated there are rules that regulate the amount of every molecule in our bodies and rules that govern the numbers of every animal and plant in the wild And the most surprising revelation about the rules that regulate life at such different scales is that they are remarkably similar there is a common underlying logic of life Carroll recounts how our deep knowledge of the rules and logic of the human body has spurred the advent of revolutionary life saving medicines and makes the compelling case that it is now time to use the Serengeti Rules to heal our ailing planet Bold and inspiring The Serengeti Rules illuminates how life works at vastly different scales Read it and you will never look at the world the same way again *Biological Approaches to Regenerative Soil Systems* Norman Uphoff,Janice Thies,2023-10-27 Agriculture in the 21st century will need considerable modification to remain both productive and sustainable Greater production is needed to meet the needs of our still growing populations and to combat hunger and poverty Declines in soil health and the pollution of water sources are making many of our production systems less tenable These adverse trends are exacerbated more and more by the impacts of climate change There are fortunately alternative methods available for agricultural practice that can countervail these constraints Biological Approaches to Regenerative Soil Systems brings together the work of both researchers and practitioners to map out better approaches to contemporary agriculture that draw upon both old and new knowledge It presents the science that underlies more biologically driven strategies as well as contemporary innovative experiences in diverse parts of the world Both accepted research and these

varied experiences encourage confidence that these approaches not relying primarily on the introduction of new varieties and on exogenous inputs can succeed This book updates and revises a preceding volume Biological Approaches to Sustainable Soil Systems published by CRC Press in 2006 So much has been learned and done on this subject in the past decade and a half that a second edition was warranted For instance the first edition was published knowledge about plant soil microbiomes which are a frequent focus in this book has mushroomed Because sustainability is a broad term and an end state the editors preferred to assemble expertise regarding regenerative agriculture which is concerned with the means for achieving sustainability The concept of regenerative soil systems entities that are more complex and multifaceted than soil alone also incorporates a concern with having more resilient agricultural systems ones that are better able to cope with the multiple stresses of climate change that are foreseen for the decades ahead The book s chapters representing a wide range of disciplines were contributed by 84 scientists and practitioners from 20 countries Although they come from persons with in depth knowledge of their respective fields the chapters are written to be accessible to readers who are not trained in the specialized subjects Taken together the chapters provide students researchers practitioners planners and policy makers with a comprehensive understanding of both the science and the steps needed to regenerate and sustain soil systems around the world for the long term benefit of humankind and the environment
