Design Live Loads for Parking Garages Y. K. Wen, G. L. Yeo, 2000-01-01 Report to the Structural Engineering Institute of ASCE This report provides a better understanding of parking garage live loads and recommends an appropriate value for design Based on a load survey conducted in nine parking garages in Chicago and Champaign Urbana Illinois and Cambridge and Boston Massachusetts statistical analyses were carried out of the equivalent uniform distributed loads These produce the maximum column axial loads and beam midspan moments that the building is expecting to experience during its lifetime The dynamic amplifications resulting from vehicle motions on the decks and ramps were also investigated and results suggest a possible reduction of the design live load from the current value of 50 psf as stipulated in the ASCE 7 and Uniform Building Code to 40 psf but with no allowance for reduction according to bay area *Flood Issues in Contemporary Water*

Management J. Marsalek, W. Ed Watt, Evzen Zeman, Friedhelm Sieker, 2012-12-06 In 1997 disastrous flooding running through the Czech Republic Poland Germany took the lives of a great number of people and caused economic damage estimated in tens of billions of dollars Flooding of the Yangtze river in 1998 killed more than 3000 people dislocated 230 million souls and caused direct damage of more than 45 billion Both the general public and the experts are asking what we can learn from these recent events to reduce loss of life and flood damage The 1997 floods were dealt with by experts from the Czech Republic Poland and Germany who presented timely reports on combatting floods both success stories and shortcomings This experience is further extended by reports from experts drawn from 13 other countries developing a broad overview of flood risk management covering the ecosystem approach to flood management including socioeconomic issues flood impacts on water quality human health and natural ecosystems **Hydrosystems Engineering Reliability Assessment and Risk**

Frangopol,2019-12-18 Our knowledge to model design analyse maintain manage and predict the life cycle performance of infrastructure systems is continually growing However the complexity of these systems continues to increase and an integrated approach is necessary to understand the effect of technological environmental economic social and political interactions on the life cycle performance of engineering infrastructure In order to accomplish this methods have to be developed to systematically analyse structure and infrastructure systems and models have to be formulated for evaluating and comparing the risks and benefits associated with various alternatives Civil engineers must maximize the life cycle benefits of these systems to serve the needs of our society by selecting the best balance of the safety economy resilience and sustainability requirements despite imperfect information and knowledge Within the context of this book the necessary concepts are introduced and illustrated with applications to civil and marine structures This book is intended for an audience of researchers and practitioners world wide with a background in civil and marine engineering as well as people working in infrastructure maintenance management cost and optimization analysis The chapters originally published as articles in *Structure and Infrastructure Engineering* *Bridge Safety, Maintenance and Management in a Life-Cycle Context* Dan M. Frangopol,Sunyong Kim,2022-02-16 During the past two decades it has been generally acknowledged that life cycle bridge analysis can be a systematic tool to address efficient and effective bridge management under uncertainty life cycle management at the bridge network level can lead to an improvement in the allocation of limited financial resources ensuring the safety and functionality of the bridge network life cycle management of bridges and bridge networks based on resilience and sustainability can improve their resistance and robustness to extreme events such as earthquakes tsunamis floods and hurricanes bridge management should consider the impact of environmental conditions and climate change This book addresses important concepts and approaches developed recently on bridge safety maintenance and management in a life cycle context Bridge life cycle performance and cost analysis prediction optimization and decision making under uncertainty are discussed The major topics include bridge safety and service life prediction bridge inspection and structural health monitoring bridge maintenance life cycle bridge and bridge network management optimum life cycle bridge management planning resilience and sustainability of bridges and bridge networks under hazards and bridge management considering climate change By providing practical applications of the presented concepts and approaches this book can help students researchers practitioners infrastructure owners and managers and transportation officials to build up their knowledge of life cycle bridge performance and cost management at both project level and network level under various deteriorating mechanisms hazards and climate change effects Defence from Floods and Floodplain Management John Gardiner,Odon Starosolszky,V.
