Francis, 2015-12-28 Materials

Processing is the first textbook to bring the fundamental concepts of materials processing together in a unified approach that highlights the overlap in scientific and engineering principles. It teaches students the key principles involved in the processing of engineering materials specifically metals, ceramics, and polymers from starting or raw materials through to the final functional forms. Its self-contained approach is based on the state of matter most central to the shaping of the material: melt, solid, powder, dispersion, and solution, and vapor. With this approach, students learn processing fundamentals and appreciate the similarities and differences between the materials classes. The book uses a consistent nomenclature that allows for easier comparisons between various materials and processes. Emphasis is on fundamental principles that gives students a strong foundation for understanding processing and manufacturing methods. Development of connections between processing and structure builds on students' existing knowledge of structure-property relationships. Examples of both standard and newer additive manufacturing methods throughout provide students with an overview of the methods that they will likely encounter in their careers. This book is intended primarily for upper-level undergraduates and beginning graduate students in Materials Science and Engineering who are already schooled in the structure and properties of metals, ceramics, and polymers and are ready to apply their knowledge to materials processing. It will also appeal to students from other engineering disciplines who have completed an introductory materials science and engineering course. Coverage of metal, ceramic, and polymer processing in a single text provides a self-contained approach and consistent nomenclature that allows for easier comparisons between various materials and processes. Emphasis on fundamental principles gives students a strong foundation for understanding processing and manufacturing methods. Development of connections between processing and structure builds on students' existing knowledge of structure-property relationships. Examples of both standard and newer additive manufacturing methods throughout provide students with an overview of the methods that they will likely encounter in their careers.

Between Manuscript and Print Sylvia Brockstieger, Paul Schweitzer-Martin, 2023-07-24. A cross-cultural comparative view on the transition from a predominant culture of handwriting to a predominant culture of print in the late medieval and early modern periods is provided here, combining research on Christian and Jewish European book culture with findings on East Asian manuscript and print culture. This approach highlights interactions and interdependencies instead of retracing a linear process from the manuscript book to its printed successor. While each chapter is written as a disciplinary study focused on one specific case from the respective field, the volume as a whole allows for transcultural perspectives. It thereby not only focusses on change but also on simultaneities of manuscript and printing practices as well as on shifts in the perception of media, writing surfaces, and materials. Which values did writers, printers, and readers attribute to the handwritten and printed materials? For which types of texts was handwriting preferred or perceived as suitable? How and under which circumstances could handwritten and printed texts coexist even within the same document, and which epistemic dynamics emerged from such textual assemblages?
