This book offers a practical guide to mixed method research, highlighting aspects of research design, execution, and analysis under various perspectives and research traditions. These are provided in clear and readable prose with a strong focus on practicality and at the same time without resorting to oversimplification. In creating this book, the author has used many research papers in various disciplines that had focused on both practical and theoretical aspects of MMR. During the quiet two years of the Covid era and subsequent refreshment follow-up year, the author managed to identify relevant articles and many case studies that reveal various theoretical and practical aspects of the MMR with the aim of helping postgraduate students and supervisors to manage their research projects. Among the explored themes were several categories of MMR topics that satisfy both practicality and comprehensiveness requirements of the book. These categories in turn guided the author towards identifying relevant and useful case studies that complement the theoretical side of the book. These case studies are expected to help the reader in better understanding of various contexts that the MMR methodology has been used in the near past.

Qualitative Psychology: A Practical Guide to Research Methods Jonathan A. Smith, 2024-02-22 Comprehensive and practical guide to the main qualitative approaches in psychology written by the inventors of each methodology A Practical Guide to Teaching Research Methods in Education Aimee LaPointe Terosky, Vicki L. Baker, Jeffrey C. Sun, 2023-03-23 A Practical Guide to Teaching Research Methods in Education brings together more than 60 faculty experts. The contributors share detailed lesson plans about selected research concepts or skills in education and related disciplines as well as discussions of the intellectual preparation needed to effectively teach the lesson. Grounded in the wisdom of practice from exemplary and award winning faculty from diverse institution types, career stages and demographic backgrounds, this book draws on both the practical and cognitive elements of teaching educational and related research to students in higher education today. The book is divided into eight sections covering the following key elements within education and related research: problems and research questions, literature reviews and theoretical frameworks, research design, quantitative methods, qualitative methods, mixed methods, findings and discussions, and special topics such as student identity, development, community and policy, engaged research, and research dissemination. Within each section, individual chapters specifically focus on skills and perspectives needed to navigate the complexities of educational research. The concluding chapter reflects on how teachers of research also need to be learners of research as faculty continuously strive for mastery, identity, and creativity in how they guide our next generation of knowledge producers through the research process.
