Entrenchment and the Psychology of Language Learning Hans-Jörg Schmid, 2016-12-19 In recent years linguists have increasingly turned to the cognitive sciences to broaden their investigation into the roots and development of language With the advent of cognitive linguistic usage based and complex adaptive models of language linguists today are utilizing approaches and insights from cognitive psychology neuropsychology social psychology and other related fields A key result of this interdisciplinary approach is the concept of entrenchment the ongoing reorganization and adaptation of communicative knowledge Entrenchment posits that our linguistic knowledge is continuously refreshed and reorganized under the influence of social interactions It is part of a larger ongoing process of lifelong cognitive reorganization whose course and quality is conditioned by exposure to and use of language and by the application of cognitive abilities and processes to language This volume enlists more than two dozen experts in the fields of linguistics psycholinguistics neurology and cognitive psychology in providing a realistic picture of the psychological and linguistic foundations of language Contributors examine the psychological foundations of linguistic entrenchment processes and the role of entrenchment in first language acquisition second language learning and language attrition Critical views of entrenchment and some of its premises and implications are discussed from the perspective of dynamic complexity theory and radical embodied cognitive science

Corpus Perspectives on Patterns of Lexis Hilde Hasselgård, Jarle Ebeling, Signe Oksefjell Ebeling, 2013-06-15 A hallmark of corpus linguistics is the study of patterns of language use The studies presented in this volume all use corpora to

investigate patterns of lexis from various perspectives The first section Sequence and Order presents theoretical and practical aspects of the linguist s task of uncovering the principles that determine such patterns The next section Competing Constructions discusses the relationship between lexical patterns with similar meanings in the light of diachronic regional and register variation New developments in terms of lexicogrammatical meaning and patterning are dealt with in the section Emerging Patterns The final section Correlating patterns and meaning discusses ways in which meaning can be studied in corpus data despite the lack of narrowly defined search terms Though situated at different points on a continuum between lexical and grammatical emphasis the studies all confirm the inseparability of lexis and grammar

Argument Structure in Usage-Based Construction Grammar Florent Perek, 2015-04-15 The argument structure of verbs defined as the part of grammar that deals with how participants in verbal events are expressed in clauses is a classical topic in linguistics that has received considerable attention in the literature This book investigates argument structure in English from a usage based perspective taking the view that the cognitive representation of grammar is shaped by language use and that crucial aspects of grammatical organization are tied to the frequency with which words and syntactic constructions are used On the basis of several case studies combining quantitative corpus studies and psycholinguistic experiments it is shown how a usage based approach sheds new light on a number of issues in argument realization and offers frequency based explanations for its organizing principles at three levels of generality verbs constructions and argument structure alternations
