Competition Law in Times of Crisis Conor Talbot, 2018-12-11 This book examines the role and utility of competition law within the EU's legislative and regulatory dialogue using its response to crisis conditions as a test of its aims and abilities. As such, its main conclusion is that competition policy acts as a forum for debate as to the direction of the European integration project while competition law can serve as a tool for aiding in the implementation of broader policy objectives. The analysis here explores the role of the general economic context in the application of competition law, the existence of identifiable baselines applicable in crisis conditions, the ability and role of national competition authorities in applying competition law, and the ways in which the European Commission's overarching policy goals can influence the application of competition law. The decision to take an empirical approach to this research project stems from a conviction that an investigation into the real world situations faced by firms and consumers should underpin the evaluation of the applicable legal rules. Over the past number of years, the Commission has exerted more and more influence over the development of the regional and global airline industry, and this book identifies the emergence of an apparent overarching aim on the part of the Commission to create a market with a handful of ultra-competitive airlines with international reach serviced by an array of smaller feeder airlines on a regional basis. The study of Irish beef processing, on the other hand, identifies a high level of government involvement in providing the strategic thinking behind a crisis cartel scheme and then demonstrates how the economic context exerted considerably more pressure on the government and the national court than on the competition authorities involved.

Mastering the Travel Intermediaries Ben Vinod, 2024-06-25 This book chronicles the role of travel intermediaries: global distribution systems (GDS), travel management companies (TMC), and online travel agencies (OTA) in the distribution of travel products. The book covers the historical development of these intermediaries and explores their current state and future prospects. Almost six decades after the introduction of computerized reservations systems and four decades after the introduction of Global Distribution Systems that allowed travel agents to make automated airline bookings, the distribution of air products is amid a major transition. A fundamental change is pricing power, which shifts from the GDSs to the airlines for the indirect channel. These changes are driven by advancements in technology, market economics, and airline cost controls, leading to the emergence of new revenue models that will permanently alter the landscape of air distribution. As a result, travel intermediaries are experiencing the effects of these turbulent times and must adopt innovative approaches and initiatives to adapt and transform their business models rather than maintaining the status quo. In addition to the ongoing transformation over the next decade, the advancements in emerging technologies like blockchain and decentralized digital identity will further revolutionize the distribution landscape across all sectors of the travel industry.
