QUICK REFERENCE

BY JUDY MONTGOMERY, PhD, CCC-SLP, IN COLLABORATION WITH LAURA MARSHALL, MS

Communication Sciences and Disorders

is also referred to as speech-language pathology. Professionals who work in this field are speech-language pathologists (SLPs) with a master's degree, or they can be speech-language-pathology assistants (SLPAs) with an associate or art's degree or equivalent. A critical aspect of communication is hearing. Audiology, the parallel profession of hearing science, is integrated throughout the field of study.

This guide is designed to increase your understanding of the speech-language profession, to recognize the important aspects of the practice, and to help you apply the

information to your preparation. It is divided into the core disorder areas identified by the accrediting agency, the American Speech-Language-Hearing Association (ASHA). The core disorder areas are articulation; receptive and expressive language; fluency; hearing; voice and resonance; swallowing; cognitive aspects of communication; social aspects of communication; and communication modalities. Speech-language services are delivered in schools, hospitals, private practices, early childhood education programs, university clinics, and homes. Services are provided throughout the human lifespan.

WHAT'S INCLUDED:

What Is Assessment?

SLPs diagnose the core disorder areas by conducting a thorough evaluation of an individual's speech, language, and communication skills. This includes, but is not limited to, conducting an interview; developmental history; medical reports; parent/family surveys; standardized and nonstandardized tests; an oral peripheral exam; a language sample; and audio or video recordings. These assessments are enhanced with cross-disciplinary input.

What Is Intervention?

Intervention, also referred to as treatment or remediation, is a planned course of action to reduce or eliminate the disorder that was diagnosed as a result of the assessment.

What Is Evidence-Based Practice (EBP)?

EBP is an approach in which high-quality research evidence is integrated with professional expertise and client preferences and values into the process of making clinical decisions (ASHA, 2006). Using EBP, both assessment and intervention are designed based on literature and research in the profession.
