

Pressure Switches for Fire Protective Signaling

General Instructions

These instructions cover installation, process connection, electrical connection and calibration of the SOR® Pressure Switches for Fire Protective Signaling with Hermetically Sealed Electrical Switching Elements.

The static-o-ring type Pressure Switch is suitable for a wide variety of process applications.

NOTE: If you suspect that a product is defective, contact the factory or the SOR Representative in your area for a return authorization number (RMA).

Installation

This product should only be installed by trained and competent personnel.

The pressure switch may be line mounted to either rigid process piping or electrical conduit. The body of the pressure switch should be clamped in the area between the set point adjustment protrusion and the pressure port to a suitable member on applications when rigid process piping or electrical conduit is not available.

Process Connection

Use two wrenches when connecting process pipe: an 1-1/8 inch open-end wrench to hold the hex port while connecting the process pipe; the other wrench to tighten the process pipe or tube fitting.

When rigid process piping is used, it is important that no bending or torsional forces be imposed on the pressure switch.
