Semiotics In Information Systems Engineering:

Semiotics in Information Systems Engineering Kecheng Liu, 2000-05-11 Semiotics the science of signs has long been recognised as an important discipline for understanding information and communications Moreover it has found wide application in other areas of computer science as it offers an effective insight into organisations and the computer systems that support them An organisation may be viewed as a system of information and communication in which human actors with the assistance of information technology are able to process represent store and consume information Computer systems that fit into an organisation and that support and enhance its performance and competitiveness can be better delivered if semiotic principles are understood and applied In this book first published in 2000 semiotic methods are introduced and illustrated through three major case studies which demonstrate how information systems can be developed to meet business requirements and support business objectives It will appeal to academics systems developers and analysts [The Semiotics of Information Systems](#) John Mingers, Leslie P. Willcocks, 2023-08-29 The central concepts of information meaning embodied cognition and semiotics are hugely relevant to contemporary organisations and personal and social lives However these concepts are not well understood and are frequently under represented misrepresented and their importance seriously underplayed in the study of management This is particularly noticeable in the study of the information systems and digital technologies that underpin so much of business operations personal and social life organisation communication and management today This book seeks to fill the obvious gap It provides detailed understanding of fundamental concepts and develops a useable integrative semiotics framework The framework is grounded in rich social theory and philosophy and as the book demonstrates provides a valuable exploratory and explanatory framework for researchers This takes shape as a 12 step research process that has the general features of most research methodologies but also provides distinctive rich resources for in depth research into semiotically related phenomena It will be of great interest to academics undertaking research in digital technologies and business model innovation as well as scholars of research methodology organisation studies HRM marketing and information systems [Web Information Systems Engineering](#) Armin Haller, Guangyan Huang, Zhisheng Huang, Hye-young Paik, Quan Z. Reframing Humans in Information Systems Development Hannakaisa Isomäki, Samuli Pekkola, 2010-10-12 Modern society

has been transformed by the digital convergence towards a future where technologies embed themselves into the fabric of everyday life. This ongoing merging of social and technological infrastructures provides and necessitates new possibilities to renovate past notions, models and methods of information systems development that accommodates humans as actors within the infrastructure. This shift introduces new possibilities for information systems designers to fulfil more and more everyday functions and to enhance their value and worth to the user. Reframing Humans in Information Systems Development aims to reframe the phenomenon of human centered development of information systems by connecting scientific constructs produced within the field of information systems which has recently provided a plethora of multidisciplinary user views without explicitly defining clear constructs that serve the IS field in particular. IS researchers, practitioners and students would benefit from Reframing Humans in Information Systems Development as the book provides a comprehensive view to various human centered development methods and approaches. The representatives of the fields of Human Computer Interaction and Computer Supported Collaborative Work will also find this book an excellent resource. A theoretical handbook and collection of practical experiences are included along with critical discussions of the utilization methods in ISD and their implications with some interconnecting commentary viewpoints.

Information, Organisation and Technology Kecheng Liu, Rodney J. Clarke, Peter Bøgh Andersen, Ronald K. Stamper, 2012-12-06. Organisational semiotics is a discipline that is concerned with the interrelationships between individuals and groups and between humans and technology functioning in organisations and society. Organisational semiotics opens up the prospect of theory building and the development of new methods and techniques to gain insights into organised behaviour and enacted social practices in the presence and absence of various technologies. It shares common interests with many other approaches to information and organisations such as computer science, computational semiotics, organisational engineering and language action perspective. The common vision shared by these approaches is to treat organisations and related information systems and technologies within a unified semiotic framework with particular reference to the huge range of issues that elude many traditional disciplines. The analysis and design of information systems develops methods for solving the practical problems but offers no rigorous theoretical foundation for them or how information functions within and between organisations. The semiotic perspective accommodates the individual and the social, the human and the technical, intra and inter organisational interactions at a level of detail that is required in the study, modelling, design and engineering of new and alternative organisational and technical systems. This perspective is outlined in the chapter presentations of *Information Organisation and Technology*.
