Sentic Computing Erik Cambria, Amir Hussain, 2012-07-28 In this book common sense computing techniques are further developed and applied to bridge the semantic gap between word level natural language data and the concept level opinions conveyed by these In particular the ensemble application of graph mining and multi dimensionality reduction techniques is exploited on two common sense knowledge bases to develop a novel intelligent engine for open domain opinion mining and sentiment analysis The proposed approach termed sentic computing performs a clause level semantic analysis of text which allows the inference of both the conceptual and emotional information associated with natural language opinions and hence a more efficient passage from unstructured textual information to structured machine processable data **Advances in**
