Sentiment Analysis And Opinion Mining Synthesis Lectures On Human Language Technologies:

Sentiment Analysis and Opinion Mining Bing Liu, 2012-05-01 Sentiment analysis and opinion mining is the field of study that analyzes people's opinions, sentiments, evaluations, attitudes, and emotions from written language. It is one of the most active research areas in natural language processing and is also widely studied in data mining, Web mining, and text mining. In fact, this research has spread outside of computer science to the management sciences and social sciences due to its importance to business and society as a whole. The growing importance of sentiment analysis coincides with the growth of social media, such as reviews, forum discussions, blogs, micro blogs, Twitter, and social networks. For the first time in human history, we now have a huge volume of opinionated data recorded in digital form for analysis. Sentiment analysis systems are being applied in almost every business and social domain because opinions are central to almost all human activities and are key influencers of our behaviors. Our beliefs and perceptions of reality and the choices we make are largely conditioned on how others see and evaluate the world. For this reason, when we need to make a decision, we often seek out the opinions of others. This is true not only for individuals but also for organizations. This book is a comprehensive introductory and survey text. It covers all important topics and the latest developments in the field with over 400 references. It is suitable for students, researchers, and practitioners who are interested in social media analysis in general and sentiment analysis in particular. Lecturers can readily use it in class for courses on natural language processing, social media analysis, text mining, and data mining. Lecture slides are also available online. Table of Contents: Preface, Sentiment Analysis: A Fascinating Problem, The Problem of Sentiment Analysis, Document Sentiment Classification, Sentence Subjectivity and Sentiment Classification, Aspect-Based Sentiment Analysis, Sentiment Lexicon Generation, Opinion Summarization, Analysis of Comparative Opinions, Opinion Search and Retrieval, Opinion Spam Detection, Quality of Reviews, Concluding Remarks, Bibliography, Author Biography.

Opinion Mining in Information Retrieval Surbhi Bhatia, Poonam Chaudhary, Nilanjan Dey, 2020-05-19 This book discusses in detail the latest trends in sentiment analysis, focusing on how online reviews and feedback reflect the opinions of users and have led to a major shift in the decision-making process at organizations. Social networking has become essential in today's society. In the past, people's decisions to buy certain products and companies' efforts to sell them were largely based on advertisements, surveys, focus groups, consultants, and the opinions of friends and relatives. But now this is no longer limited to one's circle of friends, family, or small surveys; it has spread globally to online social media in the form of blogs, posts, tweets, social networking sites, review sites, and so on. Though not always easy, the transition from surveys to social media is certainly lucrative. Business analytical reports have shown that many organizations have improved their sales, marketing, and strategy setting up new policies and making decisions based on opinion mining techniques. **Computational Intelligence in Data Mining—Volume 1** Himansu Sekhar Behera, Durga Prasad Mohapatra, 2015-12-08 The book is a collection of high-quality peer-reviewed research papers presented in the Second International Conference on Computational Intelligence in Data
