Multiscale Modeling A Bayesian Perspective:

Multiscale Modeling Marco A.R. Ferreira, Herbert K.H. Lee, 2007-07-27 This highly useful book contains methodology for the analysis of data that arise from multiscale processes. It brings together a number of recent developments and makes them accessible to a wider audience. Taking a Bayesian approach allows for full accounting of uncertainty and also addresses the delicate issue of uncertainty at multiple scales. These methods can handle different amounts of prior knowledge at different scales as often occurs in practice.

The Oxford Handbook of Applied Bayesian Analysis Anthony O' Hagan, Mike West, 2010-03-18 Bayesian analysis has developed rapidly in applications in the last two decades and research in Bayesian methods remains dynamic and fast growing. Dramatic advances in modelling concepts and computational technologies now enable routine application of Bayesian analysis using increasingly realistic stochastic models and this drives the adoption of Bayesian approaches in many areas of science, technology, commerce and industry. This Handbook explores contemporary Bayesian analysis across a variety of application areas. Chapters written by leading exponents of applied Bayesian analysis showcase the scientific ease and natural application of Bayesian modelling and present solutions to real, engaging, societally important and demanding problems. The chapters are grouped into five general areas: Biomedical, Industry, Economics, Environment, Policy, Political and Natural Engineering Sciences, and Appendix material in each touches on key concepts, models and techniques of the chapter that are also of broader pedagogic and applied interest.

Modeling Spatio-Temporal Data Marco A. R. Ferreira, 2024-11-29 Several important topics in spatial and spatio-temporal statistics developed in the last 15 years have not received enough attention in textbooks. *Modeling Spatio-Temporal Data: Markov Random Fields, Objectives Bayes and Multiscale Models* aims to fill this gap by providing an overview of a variety of recently proposed approaches for the analysis of spatial and spatio-temporal datasets, including proper Gaussian Markov random fields, dynamic multiscale spatio-temporal models and objective priors for spatial and spatio-temporal models. The goal is to make these approaches more accessible to practitioners and to stimulate additional research in these important areas of spatial and spatio-temporal statistics. Key topics: Proper Gaussian Markov random fields and their uses as building blocks for spatio-temporal models and multiscale models; Hierarchical models with intrinsic conditional autoregressive priors for spatial random effects including reference priors; results on fast computations and objective Bayes model selection; Objective priors for state space models and a new approximate reference prior for a spatio-temporal model with dynamic spatio-temporal random effects; Spatio-temporal models based on proper Gaussian Markov random fields for Poisson observations; Dynamic multiscale spatio-temporal thresholding for spatial clustering and data compression; Multiscale spatio-temporal assimilation of computer model output and monitoring station data; Dynamic multiscale heteroscedastic multivariate spatio-temporal models; The M-open multiple optima paradox and some of its practical implications for multiscale modeling; Ensembles of dynamic multiscale spatio-temporal models for smooth spatio-temporal processes. The audience for this book are practitioners.

researchers and graduate students in statistics data science machine learning and related fields Prerequisites for this book are master s level courses on statistical inference linear models and Bayesian statistics This book can be used as a textbook for a special topics course on spatial and spatio temporal statistics as well as supplementary material for graduate courses on spatial and spatio temporal modeling *Bayesian Inference in Wavelet-Based Models* Peter Müller, Brani

Vidakovic, 2012-12-06 This volume presents an overview of Bayesian methods for inference in the wavelet domain The papers in this volume are divided into six parts The first two papers introduce basic concepts Chapters in Part II explore different approaches to prior modeling using independent priors Papers in the Part III discuss decision theoretic aspects of such prior models In Part IV some aspects of prior modeling using priors that account for dependence are explored Part V considers the use of 2 dimensional wavelet decomposition in spatial modeling Chapters in Part VI discuss the use of empirical Bayes estimation in wavelet based models Part VII concludes the volume with a discussion of case studies using wavelet based Bayesian approaches The cooperation of all contributors in the timely preparation of their manuscripts is greatly recognized We decided early on that it was important to referee and critically evaluate the papers which were submitted for inclusion in this volume For this substantial task we relied on the service of numerous referees to whom we are most indebted We are also grateful to John Kimmel and the Springer Verlag referees for considering our proposal in a very timely manner Our special thanks go to our spouses Gautami and Draga for their support **Time Series** Raquel Prado, Marco A. current research frontiers *Introduction to Empirical Processes and Semiparametric Inference* Michael R. Kosorok, 2007-12-29 The goal of this book is to introduce statisticians and other researchers with a background in mathematical statistics to empirical processes and semiparametric inference These powerful research techniques are surprisingly useful for studying large sample properties of statistical estimates from realistically complex models as well as for developing new and proved approaches to statistical inference This book is more of a textbook than a research monograph although a number of new results are presented The level of the book is more troductory than the seminal work of van der Vaart and Wellner 1996 In fact another purpose of this work is to help readers prepare for the mathematically advanced van der Vaart and Wellner text as well as for the semiparametric inference work of Bickel Klaassen Ritov and We ner 1997 These two books along with Pollard 1990 and Chapters 19 and 25 of van der Vaart 1998 formulate a very complete and successful elucidation of modern empirical process methods The present book owes much by the way of inspiration concept and notation to these previous works What is perhaps new is the gradual yetrigorous anduni ed way this book introduces the reader to the eld **Simulation and Inference for Stochastic Differential Equations** Stefano M. Iacus, 2009-04-27 This book covers a highly relevant and timely topic that is of wide interest especially in finance engineering and computational biology The introductory material on simulation and stochastic differential equation is very accessible and will prove popular with many readers While there are several recent texts available that cover stochastic differential equations the concentration here on inference makes this book stand out No other direct competitors are known to date With an emphasis on the practical implementation of the simulation and estimation methods presented the text will be useful to practitioners and students with minimal mathematical background What s more because of the many R programs the information here is appropriate for many mathematically well educated practitioners too **Statistical Learning from a Regression Perspective** Richard A. Berk, 2008-06-14 Statistical Learning from a Regression Perspective considers statistical learning applications when interest centers on the conditional distribution of the response variable given a set of predictors and when it is important to characterize how the predictors are related to the response As a first approximation this is can be seen as an extension of nonparametric regression Among the statistical learning procedures examined are bagging random forests boosting and support vector machines Response variables may be quantitative or categorical Real applications are emphasized especially those with practical implications One important theme is the need to explicitly take into account asymmetric costs in the fitting process For example in some situations false positives may be far less costly than false negatives Another important theme is to not automatically cede modeling decisions to a fitting algorithm In many settings subject matter knowledge should trump formal fitting criteria Yet another important theme is to appreciate the limitation of one s data and not apply statistical learning procedures that require more than the data can provide The material is written for graduate students in the social and life sciences and for researchers who want to apply statistical learning procedures to

scientific and policy problems Intuitive explanations and visual representations are prominent All of the analyses included are done in R *Correlated Data Analysis: Modeling, Analytics, and Applications* Xue-Kun Song, Peter X. -K. Song, 2007-07-27 This book covers recent developments in correlated data analysis It utilizes the class of dispersion models as marginal components in the formulation of joint models for correlated data This enables the book to cover a broader range of data types than the traditional generalized linear models The reader is provided with a systematic treatment for the topic of estimating functions and both generalized estimating equations GEE and quadratic inference functions QIF are studied as special cases In addition to the discussions on marginal models and mixed effects models this book covers new topics on joint regression analysis based on Gaussian copulas *Handbook of Markov Chain Monte Carlo* Steve Brooks, Andrew Gelman, Galin Jones, Xiao-Li Meng, 2011-05-10 Since their popularization in the 1990s Markov chain Monte Carlo MCMC methods have revolutionized statistical computing and have had an especially profound impact on the practice of Bayesian statistics Furthermore MCMC methods have enabled the development and use of intricate models in an astonishing array of disciplines as diverse as fisheries
