Multiple Indicators An Introduction Quantitative Applications In The Social Sciences:

Multiple Indicators, 1985 **Advances in Quality-of-Life Theory and Research** M. Joseph Sirgy, Don Rahtz, A. Coskun Samli, 2013-03-09 Advances in Quality of Life Theory and Research is relevant to quality of life researchers working in the areas of Social Medicine Sustainable Development Social Indicators Research and Health Psychology Behavioral Medicine This volume contains 14 chapters that represent a culmination of programmatic research in the science of quality of life QOL Each chapter offers interesting findings in different areas of QOL research and together the chapters reflect the very basic premise that QOL research is a broad interdisciplinary topic explored in a multidisciplinary manner The research methods and conceptual models used by the different authors are exemplary and can induce QOL researchers to conduct future research in QOL in other cultures geographic areas and different socio economic and demographic groups as well as in different QOL domains *Contexts of Learning Mathematics and Science* Sarah J. Howie, Tjeerd Plomp, 2006-04-18 This book is the result of research from over fifteen countries asking which background and environmental factors influence achievement in mathematics and science This research is based on data from the Third International Mathematics and Science Study TIMSS which was conducted under the auspices of the International Association for the Evaluation of Educational Achievement IEA in 1995 and 1998 In many countries researchers have started secondary analysis of the data in search for relationships between contextual factors and achievement In these analyses two different approaches can be distinguished which can be characterised by the metaphors of fishing and hunting In the fishing approach researchers begin with an open mind considering all possible context variables as potentially influential Applying analysis techniques such as regression analysis Lisrel PLS HLM and MLN they then identify important factors within their countries or across a number of countries In the hunting approach researchers hypothesise certain context variables and trace the effect of these variables on mathematics and or science achievement *Multiple Indicators* John L. Sullivan, Stanley Feldman, 1979 SAGE provides a presentation and critique of the use of multiple measures of theoretical concepts for the assessment of validity using the multi trait multi method matrix and reliability using multiple indicators with a path analytic framework [Event History Analysis](#) Paul David Allison, 1984-11 Drawing on recent event history analytical methods from biostatistics engineering and sociology this clear and comprehensive monograph explains how longitudinal data can be used to study the causes of deaths crimes wars and many other human events Allison shows why ordinary multiple regression is not suited to analyze event history data and demonstrates how innovative regression like methods can overcome this problem He then discusses the particular new methods that social scientists should find useful [Nonparametric Simple Regression](#) John Fox, 2000-01-20 Nonparametric simple regression forms the basis for nonparametric multiple regression and directly supplies the building blocks for the type of nonparametric multiple regression called additive regression [Cohort Analysis](#) Norval D. Glenn, 2005-01-10 A method for studying changes in group patterns particularly groups based on age cohort analysis seeks to

isolate changes attributable to alterations in behaviour or attitudes within an age group as an example of behaviour change the pattern of consumption of alcohol within a cohort is analyzed **Logit and Probit** Vani K. Borooah, 2002 Many problems in the social sciences are amenable to analysis using the analytical tools of logit and probit models This book explains what ordered and multinomial models are and also shows how to apply them to analysing issues in the social sciences **Multidimensional Scaling** Joseph B. Kruskal, Myron Wish, 1978 Basic concepts of multidimensional scaling Interpretation of the configuration Dimensionality Three way multidimensional scaling Preparing the input for multidimensional scaling Experimental Design and Analysis Steven R. Brown, Lawrence E. Melamed, 1990 Brown and Melamed's book is one of the best concise treatments of the design and analysis of experiments that I have seen The authors begin by showing the significance of variability variance for the analysis of experiments and clearly illustrate the utility of the analysis of variance ANOVA model to the analysis of experimental data They also provide a clear discussion of more advanced topics such as nested factorial split plot and repeated measures designs Their book is comprehensive handles each topic deftly and should be readily accessible to researchers with a good grounding in basic statistics Contemporary Sociology The book is well written and includes useful examples Useful to researchers in both the planning and analysis phases of an experimental study ANNA Journal Introductory well written and has illustrative examples Highly recommended for introductory courses and self study the book can be supplemented easily with a treatment of covariates from other available study materials Journal of Marketing Research This volume introduces the reader to one of the most fundamental topics in social science statistics experimental design The authors clearly show how to select an experimental design based on the number of independent variables the sources and number of extraneous variables and the number of subjects Other topics addressed include variability hypothesis testing how ANOVA can be extended to the multi group situation the logic of the t test and completely randomized designs
