Never Lose Your Nerve Heeger:

Never Lose Your Nerve! Alan J. Heeger, 2015-10-09 *Never Lose Your Nerve* chronicles the ups and downs of a Nobel Laureate's life. Professor Alan J. Heeger was awarded the Nobel Prize in Chemistry in 2000 together with Professor Alan G. MacDiarmid and Professor Hideki Shirakawa. Filled with humor, this book tells Professor Heeger's story, his love for his family, especially how his wife's love has always been his guiding light, his progress from a young student to an eminent scientist, his passion for the theatre and its impact on his science, his adventures as a successful entrepreneur and his personal losses. Many think of scientists as risk-averse individuals, but Professor Heeger shows the absolute necessity of risk in research and that scientists are in fact risk-addicted as taking the first risky step into unfamiliar territory is a step in the right direction towards creativity and great discoveries. Never lose your nerve and you will be rewarded. Life is an exciting adventure and this book clearly demonstrates it and is for those who are looking to impact others. Perhaps the greatest pleasure of being a scientist is to have an abstract idea, then to do an experiment; more often a series of experiments is required that demonstrates the idea was correct, that is, Nature actually behaves as conceived in the mind of the scientist. This process is the essence of creativity in science. I have been fortunate to have experienced this intense pleasure many times in my life.

Alan J. Heeger **Acetylene and Its Polymers** Seth C. Rasmussen, 2018-07-21 This Brief presents for the first time a detailed historical overview of the development of acetylene polymers beginning with the initial discovery of acetylene in 1836 and continuing up through the 2000 Nobel Prize in Chemistry. The polymerization of acetylene is most commonly associated with polyacetylene, which was found to be conductive when treated with oxidizing agents such as Br₂ or I₂ in the mid to late 1970s. In fact, under the right conditions, oxidized polyacetylenes can exhibit conductivities into the metallic regime, thus providing the first example of an organic polymer exhibiting metallic conductivity. As a consequence, the 2000 Nobel Prize in Chemistry was awarded to Hideki Shirakawa, Alan MacDiarmid, and Alan Heeger for this pioneering research. The award citation reads for the discovery and development of electrically conductive polymers. Because of this, most incorrectly view polyacetylene as well as conducting polymers in general to originate in the 1970s. In this work, the author examines the polymerization of acetylene from early thermal polymerization studies to the ultimate production of the fully conjugated polyacetylene. Although true polyacetylene was not successfully produced until the 1950s by Giulio Natta, the polymerization of acetylene dates back to 1866 with the work of Marcellin Berthelot. These initial efforts were continued by a range of scientists to produce a polymeric material collectively given the name cuprene in 1900 by Paul Sabatier. Between the initial cuprene studies and the production of true polyacetylene, two related materials were also studied, usually referred to as polyenes and polyvinylenes. Although both of these materials could be thought of as forms of polyacetylene, neither was actually generated from the direct polymerization of acetylene. Readers will gain insight into the fact that polyacetylene and conducting organic polymers have a much longer history than commonly believed and involved the work of a significant

Heiney, 2022-12-21 This book traces the parallel paths of physics and astronomy at the University of Pennsylvania starting with their genesis in the 18th century through the rising stature of both departments in the 20th century and concluding with their unification in 1994 Along the way we meet David Rittenhouse who observed the transit of Venus in 1769 Charles Doolittle whose remarkable beard would freeze to his telescope on cold nights Gaylord Harnwell who transformed first the physics department and then the entire university and Raymond Davis who uncovered a mystery in the middle of the sun The stories are tragic Arthur Goodspeed failed to discover X rays through inattention horrifying Dicran Kabakjian poisoned an entire neighborhood and celebratory three Penn physicists received the Nobel Prize in the late 20th Century The reader will gain an appreciation not just of the history of one institution but of the ways these two disciplines both intersect and complement each other The Origins and Early History of Conjugated Organic Polymers Seth C.
