Visual Affect Recognition Ioanna-Ourania Stathopoulou, 2010 It is generally known that human faces as well as body motions and gestures provide a wealth of information about a person such as age race sex and emotional state This monograph primarily studies the perception of facial expression of emotion and secondarily of motion and gestures with the purpose of developing a fully automated visual affect recognition system for use in modes of human computer interaction The book begins with a survey of the literature on emotion perception followed by a description of empirical studies conducted with human participants and the construction of a face image database On the basis of this work a visual affect recognition system was developed consisting of two modules a face detection subsystem and a facial expression recognition subsystem Details of this system are demonstrated and analyzed and extensive performance evaluations and test results are provided Finally current research avenues leading to visual affect recognition via analysis of body motion and gestures are also discussed

Choraś, 2018-10-31 Presenting a collection of high quality research papers on image processing and communications this book not only discusses emerging applications of the currently available solutions but also outlines potential future techniques and research directions in these areas Gathering the proceedings of the 10th International Conference on Image Processing and Communications IP C 2018 held in Bydgoszcz Poland in November 2018 it is divided into two parts Part I focuses on image processing offering a comprehensive survey of available methods and discussing current trends in computer vision In turn Part II presents novel results on networks communications and a diverse range of applications including cybersecurity and cloud computing

Watermarking Mithun Das Gupta, 2012-05-16 This collection of books brings some of the latest developments in the field of watermarking Researchers from varied background and expertise propose a remarkable collection of chapters to render this work an important piece of scientific research The chapters deal with a gamut of fields where watermarking can be used to encode copyright information The work also presents a wide array of algorithms ranging from intelligent bit replacement to more traditional methods like ICA The current work is split into two books Book one is more traditional in its approach dealing mostly with image watermarking applications Book two deals with audio watermarking and describes an array of chapters on performance analysis of

algorithms Machine Learning Paradigms Dionisios N. Sotiropoulos, George A. Tsihrintzis, 2016-10-26 The topic of this monograph falls within the so called biologically motivated computing paradigm in which biology provides the source of models and inspiration towards the development of computational intelligence and machine learning systems Specifically artificial immune systems are presented as a valid metaphor towards the creation of abstract and high level representations of biological components or functions that lay the foundations for an alternative machine learning paradigm Therefore focus is given on addressing the primary problems of Pattern Recognition by developing Artificial Immune System based machine learning algorithms for the problems of Clustering Classification and One Class Classification Pattern Classification in particular is studied within the context of the Class Imbalance Problem The main source of inspiration stems from the fact that the Adaptive Immune System constitutes one of the most sophisticated biological systems that is exceptionally evolved in order to continuously address an extremely unbalanced pattern classification problem namely the self non self discrimination process The experimental results presented in this monograph involve a wide range of degenerate binary classification problems where the minority class of interest is to be recognized against the vast volume of the majority class of negative patterns In this context Artificial Immune Systems are utilized for the development of personalized software as the core mechanism behind the implementation of Recommender Systems The book will be useful to researchers practitioners and graduate students dealing with Pattern Recognition and Machine Learning and their applications in Personalized Software and Recommender Systems It is intended for both the expert researcher in these fields as well as for the general reader in the field of Computational Intelligence and more generally Computer Science who wishes to learn more about the field of Intelligent Computing Systems and its applications An extensive list of bibliographic references at the end of each chapter guides the reader to probe further into application area of interest to him/her
