EEG Brain Signal Classification for Epileptic Seizure Disorder Detection Sandeep Kumar Satapathy, Satchidananda Dehuri, Alok Kumar Jagadev, Shruti Mishra, 2019-02-10 EEG Brain Signal Classification for Epileptic Seizure Disorder Detection provides the knowledge necessary to classify EEG brain signals to detect epileptic seizures using machine learning techniques. Chapters present an overview of machine learning techniques and the tools available, discuss previous studies, present empirical studies on the performance of the NN and SVM classifiers, discuss RBF neural networks trained with an improved PSO algorithm for epilepsy identification, and cover ABC algorithm optimized RBFNN for classification of EEG signal. Final chapter presents future developments in the field. This book is a valuable source for bioinformaticians, medical doctors, and other members of the biomedical field who need the most recent and promising automated techniques for EEG classification. Explores machine learning techniques that have been modified and validated for the purpose of EEG signal classification using Discrete Wavelet Transform for the identification of epileptic seizures. Encompasses machine learning techniques providing an easily understood resource for both non-specialized readers and biomedical researchers. Provides a number of experimental analyses with their results discussed and appropriately validated.

New Trends in Databases and Information Systems Mykola Pechenizkiy, Marek Wojciechowski, 2012-08-22 Database and information systems technologies have been rapidly evolving in several directions over the past years. New types and kinds of data, new types of applications, and information systems to support them raise diverse challenges to be addressed. The so-called big data challenge, streaming data management, and processing social networks and other complex data analysis, including semantic reasoning, into information systems supporting, for instance, trading negotiations and bidding mechanisms, are just some of the emerging research topics. This volume contains papers contributed by six workshops: ADBIS Workshop on GPUs in Databases, GID 2012 Mining Complex and Stream Data, MCSD 12 International Workshop on Ontologies meet Advanced Information Systems, OAIS 2012 Second Workshop on Modeling Multi-commodity Trade Data models and processing, MMT 12 1st ADBIS Workshop on Social Data Processing, SDP 12 1st ADBIS Workshop on Social and Algorithmic Issues in Business Support, SAIBS, and the Ph.D. Consortium associated with the ADBIS 2012 conference, that report on the recent developments and an ongoing research in the aforementioned areas.

Case-Based Reasoning Research and Development Luc Lamontagne, Enric Plaza, 2014-09-22 This book constitutes the refereed proceedings of the 21st International Conference on Case-Based Reasoning Research and Development, ICCBR 2014, held in Cork, Ireland, in September 2014. The 35 revised full papers presented were carefully reviewed and selected from 49 submissions. The presentations cover a wide range of CBR topics of interest both to researchers and practitioners, including case retrieval and adaptation, similarity assessment, case base maintenance, knowledge management, recommender systems, multiagent systems, textual CBR, and applications to healthcare and computer games.

Deep Belief Nets in C++ and CUDA C: Volume 1 Timothy Masters, 2018-04-23 Discover the

essential building blocks of the most common forms of deep belief networks At each step this book provides intuitive motivation a summary of the most important equations relevant to the topic and concludes with highly commented code for threaded computation on modern CPUs as well as massive parallel processing on computers with CUDA capable video display cards The first of three in a series on C and CUDA C deep learning and belief nets Deep Belief Nets in C and CUDA C Volume 1 shows you how the structure of these elegant models is much closer to that of human brains than traditional neural networks they have a thought process that is capable of learning abstract concepts built from simpler primitives As such you ll see that a typical deep belief net can learn to recognize complex patterns by optimizing millions of parameters yet this model can still be resistant to overfitting All the routines and algorithms presented in the book are available in the code download which also contains some libraries of related routines What You Will Learn Employ deep learning using C and CUDA C Work with supervised feedforward networks Implement restricted Boltzmann machines Use generative samplings Discover why these are important Who This Book Is For Those who have at least a basic knowledge of neural networks and some prior programming experience although some C and CUDA C is recommended **Deep Belief Nets in C++ and**

CUDA C: Volume 2 Timothy Masters, 2018-05-29 Discover the essential building blocks of a common and powerful form of deep belief net the autoencoder You ll take this topic beyond current usage by extending it to the complex domain for signal and image processing applications Deep Belief Nets in C and CUDA C Volume 2 also covers several algorithms for preprocessing time series and image data These algorithms focus on the creation of complex domain predictors that are suitable for input to a complex domain autoencoder Finally you ll learn a method for embedding class information in the input layer of a restricted Boltzmann machine This facilitates generative display of samples from individual classes rather than the entire data distribution The ability to see the features that the model has learned for each class separately can be invaluable At each step this book provides you with intuitive motivation a summary of the most important equations relevant to the topic and highly commented code for threaded computation on modern CPUs as well as massive parallel processing on computers with CUDA capable video display cards What You ll Learn Code for deep learning neural networks and AI using C and CUDA C Carry out signal preprocessing using simple transformations Fourier transforms Morlet wavelets and more Use the Fourier Transform for image preprocessing Implement autoencoding via activation in the complex domain Work with algorithms for CUDA gradient computation Use the DEEP operating manual Who This Book Is For Those who have at least a basic knowledge of neural networks and some prior programming experience although some C and CUDA C is recommended
