Progress in Nucleic Acid Research and Molecular Biology **Annual Plant Reviews, Cell Cycle Control and Plant Development** Dirk Inzé, 2007-06-25 The cell cycle in plants consists of an ordered set of events including DNA replication and mitosis that culminates in cell division As cell division is a fundamental part of a plant's existence and the basis for tissue repair development and growth a full understanding of all aspects of this process is of pivotal importance Cell Cycle Control and Plant Development commences with an introductory chapter and is broadly divided into two parts Part 1 details the basic cell machinery with chapters covering cyclin dependent kinases CDKs cyclins CDK inhibitors proteolysis CDK phosphorylation and E2F DP transcription factors Part 2 which describes the cell cycle and plant development covers cell cycle activation cell cycle control during leaf development endoreduplication the cell cycle and trichome fruit and endosperm development the hormonal control of cell division and environmental stress and cell cycle exit The editor of this important book Professor Dirk Inzé well known and respected internationally has brought together an impressive team of contributing authors providing an excellent new volume in Blackwell Publishing's Annual Plant Reviews Series The book is an essential purchase for research teams working in the areas of plant sciences and molecular cell and developmental biology All libraries in universities and research establishments where biological sciences are studied and taught should have copies of this essential and timely volume

Progress in Cell Cycle Research Laurent Meijer, Silvana Guidet, Michel Philippe, 2012-12-06 The Progress in Cell Cycle Research series has been conceived to serve as a collection of reviews on

various aspects of a fast growing biology field the cell division cycle These reviews do not pretend to cover all aspects of cell cycle regulation and mechanisms but rather focus on a few topics of particular interest in the recent literature This third volume starts with a broad overview of the diversity of ways by which viruses subdue their host cell cycle chapter 1 Of particular interest in this area is the case of HN which has recently been extensively investigated chapter 2 Although most of our understanding of cell cycle regulation derives from work performed in yeast and animal cells plant models reviewed in chapter 3 for one of the best studied example Arabidopsis are starting to contribute significantly to the cell cycle general picture In mammals the regulation of cell division of two types of tissues the intestine chapter 4 and the developing muscle chapter 5 are investigated in an interesting physiological context Cell division is accompanied by a number of morphological changes One of them organelle transport is starting to be better understood chapter 6 The next few chapter summarise our knowledge of some essential regulators of the cell cycle A still intriguing enzyme casein kinase 2 is reviewed in detail in chapter 7 Some of the most studied cell cycle regulators are certainly the CKI s cyclin dependent kinases inhibitors chapter 8
