Computer - Human Interaction in Symbolic Computation Norbert

Kajler, 2012-12-06 The well attended March 1994 HIse workshop in Amsterdam was a very lively conference which stimulated much discussion and human human interaction As the editor of this volume points out the Amsterdam meeting was just part of a year long project that brought many people together from many parts of the world The value of the effort was not only in generating new ideas but in making people aware of work that has gone on on many fronts in using computers to make mathematics more understandable The author was very glad he attended the workshop In thinking back over the conference and in reading the papers in this collection the author feels there are perhaps four major conclusions to be drawn from the current state of work 1 graphics is very important but such features should be made as easy to use as possible 2 symbolic mathematical computation is very powerful but the user must be able to see intermediate steps 3 system design has made much progress but for semester long coursework and book length productions we need more tools to help composition and navigation 4 monolithic systems are perhaps not the best direction for the future as different users have different needs and may have to link together many kinds of tools The editor of this volume and the authors of the papers presented here have also reached and documented similar conclusions

Computer Algebra in Scientific Computing V.G. Ganzha, E.W. Mayr, E.V. Vorozhtsov, 2006-11-30 This volume contains revised versions of the papers submitted to the workshop by the participants and accepted by the program committee after a thorough reviewing process The collection of papers included in the proceedings covers not only various expanding applications of computer algebra to scientific computing but also the computer algebra systems themselves and the CA algorithms The eight earlier CASC conferences CASC 1998 CASC 1999 CASC 2000 CASC 2001 CASC 2002 CASC 2003 CASC 2004 and CASC 2005 were held respectively in St Petersburg Russia in Munich Germany in Samarkand Uzbekistan in Konstanz Germany in Crimea Ukraine in Passau Germany in St Petersburg Russia and in Kalamata Greece and they proved to be successful It was E A Grebenikow Computing Center of the Russian Academy of Sciences Moscow who drew our attention to the group of mathematicians and computer scientists at the Academy of Sciences of Moldova conducting research in the field of

computer algebra We were impressed that this group not only is concerned with applications of CA methods to problems of scientific computing but also carries out research on the fundamental principles underlying the current computer algebra systems themselves see also their papers in the present proceedings volume It was therefore decided to organize the 9th workshop on Computer Algebra in Scientific Computing CASC 2006 in Chişinău the capital of Moldova

Computer Algebra Handbook Johannes Grabmeier, Erich Kaltofen, Volker Weispfenning, 2012-12-06 Two ideas lie gleaming on the jeweler's velvet The first is the calculus the second the algorithm The calculus and the rich body of mathematical analysis to which it gave rise made modern science possible but it has been the algorithm that has made possible the modern world David Berlinski The Advent of the Algorithm First there was the concept of integers then there were symbols for integers I II III 1111 fttt what might be called a sticks and stones representation I II III IV V Roman numerals 1 2 3 4 5 Arabic numerals etc Then there were other concepts with symbols for them and algorithms sometimes for manipulating the new symbols Then came collections of mathematical knowledge tables of mathematical computations theorems of general results Soon after algorithms came devices that provided assistance for carrying out computations Then mathematical knowledge was organized and structured into several related concepts and symbols logic algebra analysis topology algebraic geometry number theory combinatorics etc This organization and abstraction lead to new algorithms and new fields like universal algebra But always our symbol systems reflected and influenced our thinking our concepts and our algorithms
