Quantifying Software Capers Jones, 2017-10-24 Software is one of the most important products in human history and is widely used by all industries and all countries It is also one of the most expensive and labor intensive products in human history Software also has very poor quality that has caused many major disasters and wasted many millions of dollars Software is also the target of frequent and increasingly serious cyber attacks Among the reasons for these software problems is a chronic lack of reliable quantified data This reference provides quantified data from many countries and many industries based on about 26 000 projects developed using a variety of methodologies and team experience levels The data has been gathered between 1970 and 2017 so interesting historical trends are available Since current average software productivity and quality results are suboptimal this book focuses on best in class results and shows not only quantified quality and productivity data from best in class organizations but also the technology stacks used to achieve best in class results The overall goal of this book is to encourage the adoption of best in class software metrics and best in class technology stacks It does so by providing current data on average software schedules effort costs and quality for several industries and countries Because productivity and quality vary by technology and size the book presents quantitative results for applications between 100 function points and 100 000 function points It shows quality results using defect potential and DRE metrics because the

number one cost driver for software is finding and fixing bugs The book presents data on cost of quality for software projects and discusses technical debt but that metric is not standardized Finally the book includes some data on three years of software maintenance and enhancements as well as some data on total cost of ownership

Mandatory Non-financial Risk-Related Disclosure Stefania Veltri,2020-07-31 This book focuses on the impact of the disclosure of non financial risk which could be seen as the most relevant non financial information NFI in the aftermath of the 2014 95 EU Directive The author analyses whether the switch from voluntary to mandatory NFI enhance the quality of disclosed NF risk related information and the usefulness of the risk disclosure for investors The book focuses specifically on the mandatory disclosure of non financial NF risks as required by the EU Directive for listed Italian companies investigating both the state of art of its disclosure and its usefulness for investors In doing so the book contributes to fill two relevant gaps in risk literature The first research gap is related to the insufficient investigation of the disclosure of NF risks Companies mandated to disclose risk related information focused mainly on financial risks in spite of the width of the definition of risk conceived as information about any opportunity danger threat or exposure that has or could impact the company in the future The second

gap is that empirical evidence about the effects of corporate risk disclosures is still limited and the potential benefits of the disclosure of information on risks have not been fully explored In particular the relationship between risk disclosures and firm value is under researched as the risk literature mainly focuses on the incentives question related to the motives for which companies decide to disclose The research in this book focuses on Italy a country that provides a unique opportunity to examine the impact of mandatory NF risk disclosure on firm market value being one of the biggest industrial European countries that had not mandatory legislation for NFI disclosure and also one of the leading countries in voluntary corporate social responsibility CSR reporting at an international level It has been carried out in the fiscal year 2017 the first year of the application of the mandatory NF disclosure for obliged Italian listed PIEs The book contributes both to the measurement literature as it presents a self constructed quality NF risks and to the value relevance analysis literature providing evidence of the usefulness of financial and non financial risk related disclosures in the Italian context
