DESCRIZIONE GENERALE

Il pulsante di segnalazione manuale MCP200CS (MCP di seguito) è appositamente progettato per l'utilizzo con i Sistemi d'incendio convenzionali ed è ideale per le installazioni interne che richiedono un'attivazione manuale o una inibizione nei Sistemi di Allarme incendio e di Estinzione.

L'MCP si attiva premendo la parte centrale dell'elemento di azionamento (le frecce di colore nero indicano il punto esatto), si ripristina tramite l'apposita chiave. È presente inoltre un LED che indica lo stato di Allarme (LED rosso fisso).

MODALITÀ DI ATTIVAZIONE

Appena si sviluppa un incendio, l'utilizzatore può premere l'elemento di azionamento dell'MCP (vedere fig.4): un **INDICATORE GIALLO** di segnalazione sarà visibile. Quando compare l'indicatore giallo significa che l'MCP è stato attivato. Si accende inoltre il LED rosso tramite la corrente di allarme della zona convenzionale.

RIPRISTINO

Una volta attivato l'MCP, il responsabile della sicurezza può riportarlo al suo stato di riposo tramite la chiave in dotazione (vedere fig.3): inserire la chiave nel foro posizionato sulla parte destra dell'MCP spingendola fino in fondo, quindi estrarla per completare l'azione di ripristino.

FUNZIONI DELLA CHIAVE

La chiave può anche essere usata per smontare l'unità principale della relativa base. Sul lato inferiore dell'MCP l'utilizzatore può trovare due piccoli fori quadrati dove inserire e spingere la chiave provocando la separazione dell'MCP (vedere la figura 3).

INSTALLAZIONE

1. Utilizzare delle viti standard per fissare la base nel punto previsto, quindi leggere i punti seguenti per effettuare i collegamenti sull'MCP.
2. Passare i fili di collegamento attraverso il foro presente sulla base.
3. Collegare i fili ai morsetti a molla L e C (ci sono due morsetti contrassegnati con L e due con C, uno per l'ingresso ed uno per l'uscita).
4. Inserire l'unità principale dell'MCP nella base e premere per fissarla insieme.

SCHEMA DI COLLEGAMENTO

L'MCP può essere connesso alla zona convenzionale tramite un collegamento standard a due fili (vedere Figura 2). Nello stato di allarme il LED dell'MCP è acceso; due resistori in parallelo limitano la corrente che circola attraverso il LED; il valore equivalente della resistenza di limitazione è 270 ohm. La corrente di allarme determinata da questo valore di resistenza rientra nell'intervallo delle tipiche centrali di rilevazione incendio convenzionali e permette, di discriminare gli allarmi del MCP da quelli dei rilevatori d'incendio collegati sulla stessa zona convenzionale. Se è richiesta una resistenza di allarme superiore (470 ohm) rimuovere il coperchio interno **B** (figura 5) e tagliare il resistore **C**. La supervisione della zona convenzionale si ottiene collegando il Resistore di Fine Linea (EOL) da 3,9 Kohm per le centrali.
