Oils And Fats In The Food Industry:

Oils and Fats in the Food Industry Frank D Gunstone, 2018
Gunstone, 2009-01-21 Oils and fats are almost ubiquitous in food processing whether naturally occurring in foods or added as ingredients for functional benefits and despite the impression given by several sources to the contrary they remain an essential part of the human diet. However it is increasingly apparent that both the quantity and the quality of the fat consumed are vital to achieving a balanced diet. Health concerns regarding high fat diets continue to have a high profile and still represent a pressing issue for food manufacturers. This volume provides a concise and easy to use reference on the nature of oils and fats for those working in the food industry and for those in the media seeking to advise the public on consumption. Written in a style that makes the concepts and information contained easily accessible and using a minimum of chemical structures the nature and composition of the constituents of oils and fats are explained. The major sources of food lipids vegetable and animal fats are outlined along with their physical characteristics. The book also focuses on the current main concerns of the food industry regarding oils and fats use including the nutritional properties of fats and oils and their various components links between chemical structure and physiological properties and the role of lipids in some of the more important disease conditions such as obesity diabetes coronary heart disease and cancer. The final chapter is devoted to a description of the most common food uses of oils and fats. The book will be of interest to food industry professionals students or others who require a working knowledge of oils and fats in the food industry.

Food Industries Manual Christopher G.J. Baker, M.D. Ranken, R.C. Kill, 2012-12-06 It is a measure of the rapidity of the changes in the food industry that yet another edition of the *Food Industries Manual* is required. Simplification and rearrangement among the chapters after a relatively short interval. As before it is a terse *Food Packaging* now merits a separate pleasure to be involved in the work and we hope chapter and some previous sections dealing mainly with storage have been expanded into a new readers wanting to know what how and why the chapter covering Food Factory Design and Operation food industry does the things which it does. For this edition we have made a major departure. There is one completely new chapter entitled *Ture* from the style of earlier editions by complete *Alcoholic Beverages* divided into Wines Beers and Spirits. Previously the chapters were arranged as a series does not yet consider the production of those of notes on specific topics set out in alphabetical order in the manner of an encyclopaedia.

Biochemistry of microbial degradation Colin Ratledge,2012-12-06 Life on the planet depends on microbial activity The recycling of carbon nitrogen sulphur oxygen phosphate and all the other elements that constitute living matter are continuously in flux microorganisms participate in key steps in these processes and without them life would cease within a few short years The comparatively recent advent of man made chemicals has now challenged the environment where degradation does not occur accumulation must perforce take place Surprisingly though even the most recalcitrant of molecules are gradually broken down and very few materials are truly impervious to microbial attack Microorganisms by their rapid growth rates have the most rapid turn over of their DNA of all living cells Consequently they can evolve altered genes and therefore produce novel enzymes for handling foreign compounds the xenobiotics in a manner not seen with such effect in other organisms Evolution with the production of micro organisms able to degrade molecules

hitherto intractable to breakdown is therefore a continuing event Now through the agency of genetic manipulation it is possible to accelerate this process of natural evolution in a very directed manner The time scale before a new microorganism emerges that can utilize a recalcitrant molecule has now been considerably shortened by the application of well understood genetic principles into microbiology However before these principles can be successfully used it is essential that we understand the mechanism by which molecules are degraded otherwise we shall not know where best to direct these efforts
