**BANTAM User Guide** Julian Ashbourn, 2013-03-09 BANTAM is the first modeling language specifically designed for applications in Biometrics and Token Technology. It represents a significant step forward for the design and implementation of biometric and related technology applications in that it is very simple to learn and use; it offers a consistent system of documentation and a clarity of presentation which make the accurate description of user requirements much easier; it provides a complete methodology for managing the project from original business case through procurement and implementation to subsequent training and support. The User Guide provides much more than just a guide to the Bantam methodology; readers will also find lots of good advice on program management in general and will gain an insight into designing biometric and related applications. It will be essential reading for anyone who is serious about biometrics and related technologies including governmental corporate end users, systems integrators, biometric vendors, application developers and device manufacturers. It will also be useful background reading for advanced students and IT and management consultants. Reviews of Julian Ashbourn's first book *Biometrics Advanced Identity Verification*. You could attend a dozen conferences and not come away with the kind of overview presented in this new book. Dave Mintie, Connecticut Department of Social Services, a highly readable, entertaining guidebook that should serve as a welcome companion for anyone who must promote, explain, justify or control an organization's transition to biometric technology. Richard Norton, Executive Director, International Biometrics Industry Association.

**New Technologies for Toxicity Testing** Michaela Balls, Robert D. Combes, Nirmala Bhogal, 2012-03-22 The central theme running through this volume on *New Technologies for Toxicity Testing* is the development and application of advanced techniques for cell and tissue culture as well as new markers and endpoints of toxicity as alternatives to the traditional paradigm of relying on data from laboratory animal tests to undertake labelling and risk assessment. Of course many of the techniques and methods described in this volume are in the early stages of development and much work will be needed to ensure their further improvement, optimisation and validation. However we are confident that this will be achieved and that just as with the in vitro assays that were validated and granted regulatory acceptance over the last decade, these and many other new advanced methods will likewise become part of the toxicologist's improved toolbox for coping with increasingly stringent and numerous regulatory requirements and test chemicals while placing less reliance on traditional testing paradigms.
