Uterine Fibroid Surgery in Gynecology and Obstetrics and Reproduction: Lights and Shadows Andrea Tinelli, Safak Hatirnaz, Radmila Sparic, 2025-10-27 One of the most prevalent and least understood disorders in women is uterine fibroids Throughout their lives up to 70% of white women and more than 80% of women of African heritage are diagnosed with these tumors also known as myomas which mostly afflict women during their reproductive years The delivery and expense of healthcare are significantly impacted by this disease on a global scale Even though the majority of women with fibroids are asymptomatic about 30% of them will require intervention due to significant symptoms that may include abnormal uterine bleeding anemia pelvic pain and pressure back pain frequent urination constipation or infertility Furthermore poor obstetric outcomes have been linked to fibroids The current options for treating symptomatic fibroid include interventional radiology medicinal surgical and expectant care Surgery is still sometimes necessary there is no doubt about that but we must now determine whether using hormonal therapy and SPRMs enables less invasive surgery or even completely avoids surgery The size quantity and position of the fibroids as well as the gynecologist's experience and the technology that is available all come into play when deciding between less invasive methods uterus sparing choices like myomectomy The majority of fibroids management techniques still involve surgical interventions with hysterectomy laparoscopic myomectomy and hysteroscopic myomectomy being the most popular procedures For decades the only procedure available to women who desired to keep their uterus was excision of the fibroids and anatomical restoration of the uterus also during obstetrics In between 80 and 90 percent of cases myomectomy patients have symptom alleviation or symptom reduction After surgery the fibroids should not recur but due to the growth of additional fibroids up to 33% of women who undergo this surgery will require a second operation within 5 years Depending on the quantity size and location of fibroids this procedure can be performed in one of three ways However surgical options do not always solve the problems especially in obstetrics In this Research Topic we will try to dissect all the problems of fibroid surgery both in gynecology and in obstetrics criticizing many aspects of the topic that have not yet been fully clarified We expect to receive but not limited to original articles case reports and reviews on the topic of Fibroid Surgery Controversies in Obstetrics and Gynecology
