High-level antimicrobial resistance or hypervirulence in emerging and re-emerging "super-bug" foodborne pathogens: Detection, mechanism, and dissemination from omics insights Yujie Hu,Wei Wang,Guerrino Macori,Scott Van Nguyen,Fengqin Li,Séamus Fanning,2024-09-30 With the expansion of the breeding production scale and the development of the food industry the prevalence of foodborne pathogens and subsequent problems including food poisoning and antimicrobial resistance AMR contribute much to the global disease burden leading to the serious health hazard and major economic losses around the world and foodborne disease has become one of the most challenging issues to public health The most common pathogens spreading foodborne diseases in humans include but are not limited to Salmonella Campylobacter Clostridium Cronobacter pathogenic Escherichia coli Listeria monocytogenes Staphylococcus aureus Vibrio parahaemolyticus Bacillus cereus Yersinia enterocolitica etc These pathogens contaminate various types of foods throughout the food chain including cereal vegetable fruit meat dairy and aquatic products in entire proceedings from farmland to fork and disseminate AMR and virulence In this process some clinically important antimicrobial resistant pathogens such as carbapenem resistant Enterobacteriaceae CRE methicillin resistant Staphylococcus aureus MRSA vancomycin resistant Enterococcus VRE colistin resistant or tigecycline resistant bacteria have spread so quickly that they could be found emerging in clinical hospitals agricultural farmlands foods food animals environments and also humans animals guts in the meantime super bug foodborne pathogens with high level AMR or hypervirulence has been disclosed emerging or re emerging in more and more publications Omics techniques including

genomics proteomics transcriptomics and metabonomics have greatly improved our understanding of the mechanisms of foodborne pathogens in terms of their AMR and pathogenesis Simultaneously an integrated multi disciplinary One Health approach has been used for widespread and sustained surveillance of foodborne pathogens based on a multi sectoral collaboration framework to mitigate and prevent the threats of pathogens of animal human environment and food origins Though a large number of foodborne pathogen isolates were collected with unfolded phenotypic characteristics as the phase goals for surveillance work it is still far from clearly exploring how many super bugs there were why they were so resistant or hypervirulent where they came from how they disseminated how the mechanisms transmitted and evolved and what the potential hazards were etc We need more intensive and compelling evidence explanation and interpretation This Research Topic aims to provide a platform for recent discoveries and the latest progress in detection mechanism and dissemination from Omics insights with regards to the emerging or re emerging foodborne pathogens with high level AMR Multi drug resistant Extensively drug resistant Pan drug resistant MDR XDR PDR or hypervirulence to increase the understanding of these superbugs to track their sources to discover the mechanisms that make them super and to uncover the dissemination along the animal food human chain based on big data and to assess the human health risks by uptaking them Emergence mechanism and dissemination of them via the food chain by using the application of Omics based technologies would be of particular interest for this topic This Research Topic welcomes authors worldwide to contribute any article types like Original Research Review 2 Mechanisms especially novel mechanisms explanation exploration or drug target development using Omics based technologies and bioinformatics analysis 3 Regionally or global dissemination of super bug foodborne pathogen clones or relevant determinants especially mobile genetic elements MGEs 4 Current advances in the novel and instant detection method models or method comparison report for the pathogenicity phenotype of the foodborne pathogens 5 Any pathogen disease prevention control and clinical treatment management developed to oppose the super bug foodborne pathogen like the gut microbiota approach etc Please note that Frontiers in Microbiology does not accept Case Reports Clinical Trials and Systematic Reviews hence Frontiers in Public Health is a better option Conflict of Interest Dr Scott Van Nguyen works for ATCC All other topic editors declare no conflict of interest
