Natural Hazards Edward A. Keller, Duane Edward DeVecchio, 2019 The new revised fifth edition of Natural Hazards remains the go to introductory level survey intended for university and college courses that are concerned with earth processes that have direct and often sudden and violent impacts on human society The text integrates principles of geology hydrology meteorology climatology oceanography soil science ecology and solar system astronomy The textbook explains the earth processes that drive hazardous events in an understandable way illustrates how these processes interact with our civilization and describes how we can better adjust to their effects Written by leading scholars in the area the new edition of this book takes advantage of the greatly expanding amount of information regarding natural hazards disasters and catastrophes The text is designed for learning with chapters broken into small consumable chunks of content for students Each chapter opens with a list of learning objectives and ends with revision as well as high level critical thinking questions A Concepts in Review feature provides an innovative end of chapter section that breaks down the chapter content by parts reviewing the learning objectives summary points important visuals and key terms New case studies of hazardous events have been integrated into

the text and students are invited to actively apply their understanding of the five fundamental concepts that serve as a conceptual framework for the text. Figures, illustrations, and photos have been updated throughout. The book is designed for a course in natural hazards for nonscience majors and a primary goal of the text is to assist instructors in guiding students who may have little background in science to understand physical earth processes as natural hazards and their consequences to society.
