**Natural Products** Lixin Zhang,Arnold L. Demain,2007-11-17 A fresh examination of the past successes of natural products as medicines and their new future from both conventional and new technologies High performance liquid chromatography profiling combinatorial synthesis genomics proteomics DNA shuffling bioinformatics and genetic manipulation all now make it possible to rapidly evaluate the activities of extracts as well as purified components derived from microbes plants and marine organisms The authors apply these methods to new natural product drug discoveries to microbial diversity to specific groups of products Chinese herbal drugs antitumor drugs from microbes and plants terpenoids and arsenic compounds and to specific sources the sea rainforest and endophytes These new opportunities show how research and development trends in the pharmaceutical industry can advance to include both synthetic compounds and natural products and how this paradigm shift can be more productive and efficacious

**Natural Compounds as Drugs, Volume I** Frank Petersen,René Amstutz,2007-12-27 In a real tour de force of pharmacological literature this edited volume s chapters highlight the biodiversity driven approaches which are now of eminent importance in natural products research It addresses the question why natural products display such complex chemical information what makes them unique as they often are and what their characteristics are Practical questions such as supply of natural substances and production optimization strategies are also covered

**Industrial Exploitation of Microorganisms** R. Saravanamurthu,2013-12-30 This book embodies 21 review articles contributed by subject experts of various areas of industrial microbiology The articles are devoted to pharma industries food and enzyme industries textile industry agro industry and cottage industry Yeast is one of the important microorganisms which have been used to produce beverages alcohols and fermented food commodities for a very long time In recent years it has been the first choice among eukaryotes to use in recombinant technology Yeast and Spirulina are being used and marketed as Single Cell Protein SCP Mushrooms have been used by humans down the ages In addition to a rich source of mycoprotein they have medicinal values also against many ailments Number of bioactive novel compounds is increasing with the discovery of microbial species and newer groups of microorganisms Some chapters are devoted to microbial bioinoculants used as biofertilizers because they are rich source of nitrogen and phosphorus for both legumes and non legumes They are being manufactured and sold in market with different trade names In addition several microbial enzymes have been produced and commercialized by various industries but highly active and potential enzymes produced through recombinant DNA technology hold much importance For example microbial proteases find application in detergent leather food and pharma industries and provide eco friendly technology for bioremediation Laccase has been worked out to be a good tool for bioremediation of non degradable wastes and xenobiotic chemicals Besides laccase based biosensors have also been constructed which can be used for phenol determination monitoring of lignin and plant flavonoids Various microbial phytases as feed supplemented have been used in freshwater and marine aquaculture for improving the

growth performance of fishes Nowadays aquaculture is growing rapidly to meet increasing food demand throughout the world for high quality fish More than 16 000 bioactive compounds have been isolated from actinomycetes alone including antibiotics enzymes vitamins amino acids siderophores and nanoparticles Biosynthesis of nanoparticles by bacteria actinomycetes and algae has been reported and work is being done nationally and internationally **Natural Product**

**Drugs: Ethnomedicine to Modern Medicine** Kishan Gopal Ramawat, 2008-11-25 Considerable progress has been made in our healthcare system in particular with respect to sensitive diagnostic tools reagents and very effective and precise drugs On the other hand high throughput screening technology can screen vast numbers of compounds against an array of targets in a very short time and leads thus tained can be further explored In developing countries the exploding population exerts pressure not only on natural resources but also on the human population self whose members strive to become successful and advance in society This leads to increased blood pressure anxiety obesity associated lipid disorders cardiovascular diseases and diabetes Most of these diseases result in disturbed family life including sexual behaviour Despite technological developments herbal drugs still occupy a preferential place in a majority of the population in the Third World and terminal patients in the West Herbal drugs in addition to being cost effective and easily accessible have been used since time immemorial and have passed the test of time without having any side effects The multitarget effects of herbs holistic

approaches are the fundamental basis of their utilization This approach is already used in traditional systems of medicine like Ayurveda which has become more popular in the West in recent years However the integration of modern science with traditional uses of herbal drugs is of the utmost importance if one wishes to use ancient knowledge for the betterment of humanity
