Natures Body Gender In The Making Of Modern Science:

Nature's Body Londa L. Schiebinger, 2004 Eighteenth century natural historians created a peculiar and peculiarly durable vision of nature one that embodied the sexual and racial tensions of that era When plants were found to reproduce sexually eighteenth century botanists ascribed to them passionate relations polyandrous marriages and suicidal incest and accounts of steamy plant sex began to infiltrate the botanical literature of the day Naturalists also turned their attention to the great apes just becoming known to eighteenth century Europeans clothing the females in silk vestments and training them to sip tea with the modest demeanor of English matrons while imagining the males of the species fully capable of ravishing women The Gender/sexuality Reader Roger N. Lancaster, Micaela Di Leonardo, 1997 Textbook on gender

Feminism in Twentieth-Century Science, Technology, and Medicine Angela N. H. Creager, Elizabeth Lunbeck, Londa Schiebinger, 2001-11 What useful changes has feminism brought to science Feminists have enjoyed success in their efforts to open many fields to women as participants But the effects of feminism have not been restricted to altering employment and professional opportunities for women The essays in this volume explore how feminist theory has had a direct impact on research in the biological and social sciences in medicine and in technology often providing the impetus for fundamentally changing the theoretical underpinnings and practices of such research In archaeology evidence of women s hunting activities suggested by spears found in women s graves is no longer dismissed computer scientists have used feminist epistemologies for rethinking the human interface problems of our growing reliance on computers Attention to women s movements often tends to reinforce a presumption that feminism changes institutions through critique from without This volume reveals the potent but not always visible transformations feminism has brought to science technology and medicine from within Contributors Ruth Schwartz Cowan Linda Marie Fedigan Scott Gilbert Evelyn M Hammonds Evelyn Fox Keller Pamela E Mack Michael S Mahoney Emily Martin Ruth Oldenziel Nelly Oudshoorn Carroll Pursell Karen Rader Alison Wylie *The Routledge Research Companion to Nineteenth-Century British Literature and Science* John Holmes, Sharon Ruston, 2017-05-18 Tracing the continuities and trends in the complex relationship between literature and science in the long nineteenth century this companion provides scholars with a comprehensive authoritative and up to date

foundation for research in this field In intellectual material and social terms the transformation undergone by Western culture over the period was unprecedented Many of these changes were grounded in the growth of science Yet science was not a cultural monolith then any more than it is now and its development was shaped by competing world views To cover the full range of literary engagements with science in the nineteenth century this companion consists of twenty seven chapters by experts in the field which explore crucial social and intellectual contexts for the interactions between literature and science how science affected different genres of writing and the importance of individual scientific disciplines and concepts within literary culture Each chapter has its own extensive bibliography The volume as a whole is rounded out with a synoptic introduction by the editors and an afterword by the eminent historian of nineteenth century science Bernard Lightman

The Moral Authority of Nature Lorraine Daston, Fernando Vidal, 2010-08-15 For thousands of years people have used nature to justify their political moral and social judgments Such appeals to the moral authority of nature are still very much with us today as heated debates over genetically modified organisms and human cloning testify The Moral Authority of Nature offers a wide ranging account of how people have used nature to think about what counts as good beautiful just or valuable The eighteen essays cover a diverse array of topics including the connection of cosmic and human orders in ancient Greece medieval notions of sexual disorder early modern contexts for categorizing individuals and judging acts as against nature race and the origin of humans ecological economics and radical feminism The essays also range widely in time and place from archaic Greece to early twentieth century China medieval Europe to contemporary America Scholars from a wide variety of fields will welcome The Moral Authority of Nature which provides the first sustained historical survey of its topic Contributors Danielle Allen Joan Cadden Lorraine Daston Fa ti Fan Eckhardt Fuchs Valentin Groebner Abigail J Lustig Gregg Mitman Michelle Murphy Katharine Park Matt Price Robert N Proctor Helmut Puff Robert J Richards Londa Schiebinger Laura Slatkin Julia Adeney Thomas Fernando Vidal *Questioning Nature* Melissa Bailes, 2017-05-19 In the mid eighteenth century many British authors and literary critics anxiously claimed that poetry was in crisis These writers complained that modern poets plagiarized classical authors as well as one another asserted that no new subjects for verse remained and feared poetry's complete exhaustion Questioning Nature explores how major women writers of the era including Mary Shelley Anna Barbauld and Charlotte Smith turned in response to developing disciplines of natural history such as botany zoology and geology Recognizing the sociological implications of inquiries in the natural sciences these authors renovated notions of originality through natural history while engaging with questions of the day Classifications hierarchies and definitions inherent in natural history were appropriated into discussions of gender race and nation Further their concerns with authorship authority and novelty led them to experiment with textual hybridities and collaborative modes of originality that competed with conventional ideas of solitary genius Exploring these authors and their work Questioning Nature explains how these women writers imaginative scientific writing unveiled a new genealogy for Romantic originality both shaping the

literary canon and ultimately leading to their exclusion from it *Complexities* Susan McKinnon, Sydel Silverman, 2005-06
This book mobilizes experts from several fields of anthropology cultural archaeological linguistic and biological to offer a compelling challenge to the resurgence of reductive theories of human biological and social life It presents evidence to contest such theories and to provide a multifaceted account of the complexity and variability of the human condition Back cover
