Entrepreneurship and Management in Forestry and Wood Processing Franz Schmithüsen, Bastian Kaiser, Albin Schmidhauser, Stephan Mellinghoff, Karoline Perchthaler, Alfred W. Kammerhofer, 2015-05-08 Forestry has long been in a rather favourable position in offering a valuable raw material source in high demand. However, with rapidly changing end user demands and cost competitiveness within the forest and wood chain as a whole, the industry is needing to adapt. Explaining entrepreneurial action as part of a chain of comprehensive value added processes leads to a new perception of forest production and wood processing. This book applies the main concepts of modern managerial science to the world of forestry and is the perfect book for students studying forestry and wood processing as well as entrepreneurs and managers within the sector. Topics are covered from an entrepreneurial perspective and include perspectives from accounting, finance, economics, supply chain management, marketing, and strategy.

GIS Methodologies for Developing Conservation Strategies Basil G. Savitsky, Thomas E. Lacher, Jr., 1998-04-28 Tropical habitats may contain more than a third of the world's plant and animal species. Costa Rica alone is home to one of the highest levels of biodiversity per unit area in the world and stands at center stage in worldwide conservation efforts. Within such regions, the use of state-of-the-art digital mapping technologies, sophisticated techniques that are relatively inexpensive and accessible, represents the future of conservation planning and policy. These methods, which employ satellites to obtain visual data on landscapes, allow environmental scientists to monitor encroachment on indigenous territories, trace park boundaries through unmarked wilderness, and identify wildlife habitats in regions where humans have limited access. Focusing on the rich biodiversity of Costa Rica, the contributors demonstrate the use of geographic information systems (GIS) to enhance conservation efforts. They give an overview of the spatial nature of conservation and management and the current status of digital mapping in Costa Rica, a review of the basic principles behind digital mapping technologies, a series of case studies using these technologies at a variety of scales and for a range of conservation and management activities, and the results of the Costa Rican gap analysis project. GIS Methodologies for Developing Conservation Strategies provides powerful tools for those involved in decision making about the natural environment, particularly in developing nations like Costa Rica, where such technologies have not yet been widely adopted. For specialists in such areas as geography, conservation biology, and wildlife and natural resource management, the combination of conceptual background and case examples makes the book a crucial addition to the literature.

Social Issues in America James Ciment, 2015-03-04 More than 150 key social issues confronting the United States today are covered in this eight-volume set, from abortion and adoption to capital punishment and corporate crime, from obesity and organized crime to sweatshops and xenophobia.

Giles M. Foody,Peter M. Atkinson,2003-07-11 Remote sensing and geographical information science GIS have advanced considerably in recent years However the potential of remote sensing and GIS within the environmental sciences is limited by uncertainty especially in connection with the data sets and methods used In many studies the issue of uncertainty has been incompletely addressed The situation has arisen in part from a lack of appreciation of uncertainty and the problems it can cause as well as of the techniques that may be used to accommodate it This book provides general overviews on uncertainty in remote sensing and GIS that illustrate the range of uncertainties that may occur in addition to describing the means of measuring uncertainty and the impacts of uncertainty on analyses and interpretations made Uncertainty in Remote Sensing and GIS provides readers with comprehensive coverage of this largely undocumented subject Relevant to a broad variety of disciplines including geography environmental science electrical engineering and statistics Covers range of material from base overviews to specific applications Focuses on issues connected with uncertainty at various points along typical data analysis chains used in remote sensing and GIS Written by an international team of researchers drawn from a variety of disciplines Uncertainty in Remote Sensing and GIS provides focussed discussions on topics of considerable importance to a broad research and user community The book is invaluable reading for researchers advanced students and practitioners who want to understand the nature of uncertainty in remote sensing and GIS its limitations and methods of accommodating it

Impacts of Global Change on the Hydrological Cycle in West and Northwest Africa Peter Speth,Michael Christoph,Bernd Diekkrüger,2010-08-12 Africa is highly vulnerable to the impacts of climate change In particular shortage of fresh water is expected to be the dominant water problem for West and Northwest Africa of the 21th century In order to solve present and projected future problems concerning fresh water supply a highly interdisciplinary approach is used in the book Strategies are offered for a sustainable and future oriented water management Based on different scenarios a range of management options is suggested with the aid of Information Systems and Spatial Decision Support Systems for two river catchments in Northwest and West Africa the wadi Dr a in south eastern Morocco and the Ou m basin in Benin The selected catchments are representative in the sense what can be learnt from these catchments for other similar catchments
