conceptual depth and examples to explain the use of recent statistical techniques and to demonstrate what conclusions can be drawn at the right time using modeling in life science research

Key features

- Explains the derivation of statistical models to prove disease transmission using massive real world datasets to explore practical applicability
- Incorporates the application of innovative advanced statistical and epidemiological models and demonstrates the possible solutions for public health policy intervention
- Helps to understand the process of hypothesis testing in small or larger observations by using weighted parameters
- Presents suitable examples and real life research datasets and all models can easily be followed in formulating statistical and mathematical derivations and key points
- Includes machine learning ML statistical methods for meta analysis testing of hypotheses methods of imputation estimation techniques probability distributions univariate analysis and recent nonparametric methods all illustrated through actual data

This textbook is for students and scholars of various courses in life sciences medicine mathematics and statistical science It will also help academicians and researchers to understand the foundation of this topic
