Process Dynamics B. Wayne Bequette, 1998 Suitable as a text for Chemical Process Dynamics or Introductory Chemical Process Control courses at the junior senior level This book aims to provide an introduction to the modeling analysis and simulation of the dynamic behavior of chemical processes Problem Solving in Chemical and Biochemical Engineering with POLYMATH, Excel, and MATLAB Michael B. Cutlip, Mordechai Shacham, 2008 Problem Solving in Chemical and Biochemical Engineering with POLYMATH Excel and MATLAB Second Edition is a valuable resource and companion that integrates the use of numerical problem solving in the three most widely used software packages POLYMATH Microsoft Excel and MATLAB Recently developed POLYMATH capabilities allow the automatic creation of Excel spreadsheets and the generation of MATLAB code for problem solutions Students and professional engineers will appreciate the ease with which problems can be entered into POLYMATH and then solved independently in all three software packages while taking full advantage of the unique capabilities within each package The book includes more than 170 problems requiring numerical solutions This greatly expanded and revised second edition includes new chapters on getting started with and using Excel and MATLAB It also places special emphasis on biochemical engineering with a major chapter on the subject and with the integration of biochemical problems throughout the book General Topics and Subject Areas Organized by Chapter Introduction to Problem Solving with Mathematical Software Packages Basic Principles and Calculations Regression and Correlation of Data Introduction to Problem Solving with Excel Introduction to Problem Solving with MATLAB Advanced Problem Solving Techniques Thermodynamics Fluid Mechanics Heat Transfer Mass Transfer Chemical Reaction Engineering Phase Equilibrium and Distillation Process Dynamics and Control Biochemical Engineering Practical Aspects of Problem Solving Capabilities Simultaneous Linear Equations Simultaneous Nonlinear Equations Linear Multiple Linear and Nonlinear Regressions with Statistical Analyses Partial Differential Equations Using the Numerical Method of Lines Curve Fitting by Polynomials with Statistical Analysis Simultaneous Ordinary Differential Equations Including Problems Involving Stiff Systems Differential Algebraic Equations and Parameter Estimation in Systems of Ordinary Differential Equations The Book's Web Site <http://www.problemsolvingbook.com> Provides solved and partially solved problem files for all three software packages plus additional materials Describes discounted purchase options for educational version of POLYMATH available to book purchasers Includes detailed selected problem solutions in Maple Mathcad and Mathematica **Springer Handbook of Automation** Shimon Y. Reading the book you can feel the long practical experience of the author The text is easy to read even where concepts can be complex The strong theoretical background of the author is well known from other publications In this book however the topics are presented on a level that every engineer and scientist in the chemical industry and process industry should know and can understand This book would have been very helpful at the beginning of my career to close the addressed gap Therefore I can strongly recommend it not only to all students close to their degree but also to engineers and scientists just starting their industrial career in the related industrial sectors that are subsumed under the term process industry chemical or petrochemical industry pharmaceutical industry food industry biochemical industry environmental technology etc The book is like an investment Doing a better job and getting a better job evaluation might pay for the book Prof Dr Ing Claus Fleischer Frankfurt University of Applied Sciences Process Engineering is based on almost 30 years of practical experience of the author in process simulation design and development The book is a missing link between students and practitioners The author has coached many graduates in their first months and knows what the typical questions are Coming from the university graduates often do not know which relevance their knowledge has and how to apply it in real life whereas established practitioners often stick to the narrow way of their experience forgetting that science continuously makes progress There is a gap to be bridged From his own professional experience the author covers many topics of the process engineering business but three guest contributions are a valuable supplement to the content of the third edition Already in the 2nd edition Verena Haas from BASF SE wrote an excellent chapter on dynamic process simulation For the new 3rd edition G kce Adali and Michael Benje added two chapters on digitalization and patents respectively Preparing the reader for the everyday business *Perry's Chemical Engineers' Handbook, 9th Edition* Don W. Green,Marylee Z.
