Project Japan Metabolism Talks By Rem Koolhaas:

Project Japan Rem Koolhaas, Hans Ulrich Obrist, Kayoko Ota, James Westcott, 2011 Metabolism was a movement launched in Japan that took inspiration for buildings and cities from biological systems With interviews and commentary and hundreds of images *Project Japan* unearths a history that casts new light on the key issues that both enervate and motivate architecture today

The Urbanism of Metabolism Raffaele Pernice, 2022-03-16 This edited book explores and promotes reflection on how the lessons of Metabolism experience can inform current debate on city making and future practice in architectural design and urban planning More than sixty years after the Metabolist manifesto was published the author's original contributions highlight the persistent links between present and past that can help to re imagine new urban futures as well as the design of innovative intra urban relationships and spaces The essays are written by experienced scholars and renowned academics from Japan Australia Europe South Korea and the United States and expose Metabolism's special merits in promoting new urban models and evaluate the current legacy of its architectural projects and urban design lessons They offer a critical intellectual and up to date account of the Metabolism projects and ideas with regard to the current evolution of architectural and urbanism discourse in a global context The collection of cross disciplinary contributions in this volume will be of great interest to architects architectural and urban historians as well as academics scholars and students in built environment disciplines and Japanese cultural studies

Setting the Scene Alistair Fair, 2016-03-03 During the twentieth century an increasingly diverse range of buildings and spaces was used for theatre Theatre architecture was re formed by new approaches to staging and performance while theatre was often thought to have a reforming role in society Innovation was accompanied by the revival and reinterpretation of older ideas The contributors to this volume explore these ideas in a variety of contexts from detailed discussions of key architects work including Denys Lasdun Peter Moro Cedric Price and Heinrich Tessenow to broader surveys of theatre in West Germany and Japan Other contributions examine the Malm Stadsteater ideal theatres in post war North America found space in 1960s New York and Postmodernity in 1980s East Germany Together these essays shed new light on this complex building type and also contribute to the wider architectural history of the twentieth century

The New Real Jonathan E. Abel, 2023-01-31 Unlocking a vital understanding of how literary studies and media studies overlap and are bound together A synthetic history of new media reception in modern and contemporary Japan The New Real positions mimesis at the heart of the media concept Considering both mimicry and representation as the core functions of mediation and remediation Jonathan E Abel offers a new model for media studies while explaining the deep and ongoing imbrication of Japan in the history of new media From stereoscopy in the late nineteenth century to emoji at the dawn of the twenty first Abel presents a pioneering history of new media reception in Japan across the analog and digital divide He argues that there are two realities created by new media one marketed to us through advertising that proclaims better faster and higher resolution connections to the real and the other experienced by

users whose daily lives and behaviors are subtly transformed by the presence and penetration of the content carried through new media Intervening in contemporary conversations about virtuality copyright copycat violence and social media each chapter unfolds with a focus on a single medium or technology including 3D photographs the phonograph television videogames and emoji By highlighting the tendency of the mediated to copy the world and the world to copy the mediated The New Real provides a new path for analysis of media culture and their function in the world *Capsules: Typology of Other Architecture* Peter Šenk, 2017-10-12 This book investigates the architectural product design and urban typology of the capsule which beginning in the 1960s broadened the concept of the basic building blocks of architecture to include a minimal living unit called the capsule Here it is presented with regard to the continuity of the development of the Modern Movement its revisionist criticism pioneering examples as well as contemporary examples and uses The typology of the capsule allows us to consider this theme in terms of the architecture of resistance with the potential to search for an other architecture that is embedded in our contemporaneity manifested in small dwellings composite structures and container units shelters and mobile homes in nature and the urban environment technology transfer in high tech designs devices additions and extensions etc The concept of the capsule as a building element of architecture as well as a spatial element can therefore be regarded as having a generative potential for an architecture of personal space for the individual forcing us to reflect on our existing living and dwelling conditions **The Urban Design Reader** Michael Larice, Elizabeth Macdonald, 2013-05-07 The second edition of The Urban Design Reader draws together the very best of classic and contemporary writings to illuminate and expand the theory and practice of urban design Nearly 50 generous selections include seminal contributions from Howard Le Corbusier Lynch and Jacobs to more recent writings by Waldheim Koolhaas and Sorkin Following the widespread success of the first edition of The Urban Design Reader this updated edition continues to provide the most important historical material of the urban design field but also introduces new topics and selections that address the myriad challenges facing designers today The six part structure of the second edition guides the reader through the history theory and practice of urban design The reader is initially introduced to those classic writings that provide the historical precedents for city making into the twentieth century Part Two introduces the voices and ideas that were instrumental in establishing the foundations of the urban design field from the late 1950s up to the mid 1990s These authors present a critical reading of the design professions and offer an alternative urban design agenda focused on vital and lively places The authors in Part Three provide a range of urban design rationales and strategies for reinforcing local physical identity and the creation of memorable places These selections are largely describing the outcomes of mid century urban design and voicing concerns over the placeless quality of contemporary urbanism The fourth part of the Reader explores key issues in urban design and development Ideas about sprawl density community health public space and everyday life are the primary focus here Several new selections in this part of the book also highlight important international development trends in the Middle East and China Part Five presents

environmental challenges faced by the built environment professions today including recent material on landscape urbanism sustainability and urban resiliency The final part examines professional practice and current debates in the field where urban designers work what they do their roles their fields of knowledge and their educational development The section concludes with several position pieces and debates on the future of urban design practice This book provides an essential resource for students and practitioners of urban design drawing together important but widely dispersed writings Part and section introductions are provided to assist readers in understanding the context of the material summary messages impacts of the writing and how they fit into the larger picture of the urban design field *Beyond Utopia* Agnes Nyilas, 2018-05-25

Megastructure proposals by the Japanese Metabolism group are commonly identified with the concept of utopia Beyond this partial understanding Agnes Nyilas suggests that rather than being merely utopian the Megastructure of Metabolism represents a uniquely amalgam genre the myth camouflaged as utopia Although its Megastructure seemingly describes a desirable future condition as utopia does it also comprises certain cultural images rooted in the collective unconscious of Japanese people in accordance with the general interpretation of myth The primary narrative of *Beyond Utopia* thus follows the gradual unfolding of the myth like characteristics of its Megastructure Myth is dealt here as an interdisciplinary subject in line with contemporary myth theories After expounding the mechanism underlying the growing demand for a new myth in architecture the origin of the myth Part I discovers the formal characteristics of the Megastructure of Metabolism to give a hint of the real intention behind it Based on this Part II is a reexamination of their design methods which aims to clarify the function of the myth and to suggest the meaning behind it Finally Part III deals with the subject matter of the myth by disclosing the meaning unfolding in the story and suggests a new reading of Metabolism urban theory as an attempt to reconsider the traditional Japanese space concept **Fifty Key Postmodern Thinkers** Stuart Sim, 2013-08-21

Postmodernism is an important part of the cultural landscape which continues to evolve yet the ideas and theories surrounding the subject can be diverse and difficult to understand *Fifty Postmodern Thinkers* critically examines the work of fifty of the most important theorists within the postmodern movement who have defined and shaped the field bringing together their key ideas in an accessible format Drawing on figures from a wide range of subject areas including literature cultural theory philosophy sociology and architecture those covered include John Barth Umberto Eco Slavoj Žižek Cindy Sherman John Cage Jean-François Lyotard Charles Jencks Jacques Derrida Homi K. Bhabha Quentin Tarantino Each entry examines the thinkers' career key contributions and theories and refers to their major works A valuable resource for those studying postmodern ideas at both undergraduate and postgraduate level this text will appeal across the humanities and social sciences **Architecture Thinking across Boundaries** Rajesh Heynicks, Ricardo Costa Agarez, Elke

Couchez, 2021-01-14 While most studies on the history of architectural theory have been concerned with what has been said and written this book is concerned with how architecture theory has been created and transmitted *Architecture Thinking*

across Boundaries looks at architectural theory through the lens of intellectual history Eleven original essays explore a variety of themes and contexts each examining how architectural knowledge has been transferred across social spatial and disciplinary boundaries whether through the international circulation of ideas transdisciplinary exchanges or transfers from design practice to theory and back again Dissecting the frictions transformations and resistances that mark these journeys the essays in this book reflect upon the myriad routes that architectural knowledge has taken while developing into architectural theory They critically enquire the interstices geographical temporal and epistemological that lie beyond fixed narratives They show how unstable vital and eminently mobile the processes of thinking about architecture have been

Climatic Media Yuriko Furuhashi, 2022-01-24 In *Climatic Media* Yuriko Furuhashi traces climate engineering from the early twentieth century to the present emphasizing the legacies of Japan's empire building and its Cold War alliance with the United States Furuhashi boldly expands the scope of media studies to consider technologies that chemically condition Earth's atmosphere and socially condition the conduct of people focusing on the attempts to monitor and modify indoor and outdoor atmospheres by Japanese scientists technicians architects and artists in conjunction with their American counterparts She charts the geopolitical contexts of what she calls climatic media by examining a range of technologies such as cloud seeding and artificial snowflakes digital computing used for weather forecasting and weather control cybernetics for urban planning and policing Nakaya Fujiko's fog sculpture and the architectural experiments of Tange Lab and the Metabolists who sought to design climate controlled capsule housing and domed cities Furuhashi's transpacific analysis offers a novel take on the elemental conditions of media and climate change
