Project Orion The True Story Of The Atomic Spaceship:

Project Orion George Dyson, 2002-04-16 Project Orion chronicles a fascinating episode in U S scientific research while capturing a unique time in American history and culture It is the improbable story of the wildest idea a space craft powered by hydrogen bombs to come out of the space race 8 page photo insert *Project Orion* George Dyson, 2003-04-01

In 1957 a small group of scientists supported by the U S government launched an attempt to build a four thousand ton spaceship propelled by nuclear bombs The initial plan called for missions to Mars by 1965 and Saturn by 1970 After seven years of work political obstacles brought the effort to a halt The Orion team led by the American bomb designer Theodore B Taylor included the physicist Freeman Dyson whose son George was five years old when the existence of the project was first announced In Project Orion George Dyson has synthesized hundreds of hours of interviews and thousands of pages of newly excavated documents still only partially declassified to piece together one of the most tantalizing what if stories of the twentieth century *Project Orion* George Dyson, 2025-03

In 1957 in response to Sputnik and in advance of NASA a small group of scientists and engineers at a startup named General Atomic launched an attempt to build an interplanetary spaceship powered by nuclear bombs They aimed to reach Mars by 1965 and Saturn by 1970 in 4 000 ton ships carrying payloads of 1 000 tons Project Orion based on hundreds of hours of interviews and thousands of pages of declassified documents reveals their story firsthand This expanded edition includes a revision of the long out of print 2002 text with updated notes references index and a chronological listing of technical reports a new foreword by Freeman Dyson a new afterword 52 pages of illustrations and 12 previously unpublished manuscript calculation sheets *A History of the Atomic Space Age and Its Implications for the Future* Willis L. Shirk, 2018-02-12 The Atomic Space Age has been and continues to be an engine for future wealth creation Humanity stands on the verge of becoming an interplanetary species We know we are made of star stuff precisely because many of the isotopes in our bodies originated in the death throes of dying suns With the discovery of nuclear fission in 1938 mankind was for the first time able to glimpse both our distant past and our possible future As with the discovery of fire and agriculture thousands of years ago wind power hundreds of years ago and steam power and electricity in the nineteenth century we must now learn to tame this powerful new force locked within the heart of the atom Buckminster Fuller once observed that wealth is nothing more than energy compounded by ingenuity Since mass energy can never decrease and ingenuity will only increase there is no limit to the quantity of wealth that our species can and will create using nuclear space propulsion *Chasing The Ghost: Nobelist Fred Reines And The Neutrino* Leonard A

Cole, 2021-03-17 A mixture of memoir and biography Chasing the Ghost Nobelist Fred Reines and the Neutrino tells a deeply human story that appeals both to scientists and non scientists Although the book relates to the important discovery of neutrinos it is more intimately about Fred Reines than the technical details of neutrino physics Narrated in a fashion to interest and excite the reader the science presented here is accessible to a broad audience Coursing through Reines life his

various challenges and encounters the book reveals constants of his persona Reines displayed a sustained consistency as a respected leader admired by students and colleagues as a fount of big ideas and ambition A continuing source of inspiration and motivation to others his most basic consistency was his passion for science The quest for knowledge about the wondrous universe is a profoundly human endeavor Fred Reines life and his unremitting scientific curiosity are emblematic of that truth This book is a most welcome account about Frederick Reines and his great contributions to neutrino physics and astrophysics The methods he designed in the 1950s to discover neutrinos in nuclear reactor experiments are still being used His later work included the detection of atmospheric neutrinos which was a forerunner to the discovery of neutrino oscillations the ability of neutrinos to change from one type to another This finding was a significant step to other experiments that aim to answer profound questions about the nature of the universe including why it is composed of matter Takaaki Kajita Nobel Laureate in Physics Neutrino Researcher University of Tokyo Cole has provided a compelling personal and scientific account of a remarkable pioneer in Neutrino Physics Arthur B McDonald Nobel Laureate in Physics Director of the Sudbury Neutrino Observatory Professor Queen s University Ontario Canada

The Future of Nuclear Power, Revised Edition James Mahaffey, 2020-03-01 Newly conceived safer reactor designs are being built in the United States and around the world to replace the 104 obsolete operating nuclear power reactors in this country alone The designs which once seemed exotic and futuristic are now 40 years old and one by one these vintage Generation II plants will reach the end of productive service in the next 30 years The Future of Nuclear Power Revised Edition examines the advanced designs practical concepts and fully developed systems that have yet to be used This eBook introduces readers to the traditional American system of units with some archaic terms remaining in use Ideal for students and teachers interested in the technology of energy production in the next 100 years this updated full color resource provides clear explanations of the terms and expressions used almost exclusively in nuclear science and the direction in which nuclear power is expected to go

Nuking the Moon Vince Houghton, 2019-05-07 The International Spy Museum s Historian takes us on a wild tour of missions and schemes that almost happened but were ultimately deemed too dangerous expensive ahead of their time or even certifiably insane Compulsively readable laugh out loud history Mary Roach New York Times bestselling author of Grunt and Stiff In 1958 the U S Air Force nuked the moon as a show of military force In 1967 the CIA sent live cats to spy on the Soviet government In 1942 the British built a torpedo proof aircraft carrier out of an iceberg Of course none of these things ever actually happened But in Nuking the Moon intelligence historian Vince Houghton proves that abandoned plans can be just as illuminating and every bit as entertaining as the ones that made it Vividly capturing the fascinating stories of how twenty one plans from WWII and the Cold War went from conception planning and testing to cancellation Houghton explores what happens when innovation meets desperation For every plan as

good as D Day there s a scheme to strap bombs to bats or dig a spy tunnel underneath the Soviet embassy Along the way he reveals what each one tells us about twentieth century history the art of spycraft military strategy and famous figures like JFK Castro and Churchill By turns terrifying and hilarious but always riveting this is the unique story of history left on the drawing board

To Rule the Skies Brent D Ziarnick,2021-02-15 To Rule the Skies General Thomas S Power and the Rise of Strategic Air Command in the Cold War fills a critical gap in Cold War and Air Force history by telling the story of General Thomas S Power for the first time Thomas Power was second only to Curtis LeMay in forming the Strategic Air Command SAC one of the premier combat organizations of the twentieth century but he is rarely mentioned today What little is written about Power describes him as LeMay s willing hatchet man uneducated unimaginative autocratic and sadistic Based on extensive archival research General Power seeks to overturn this appraisal Brent D Ziarnick covers the span of both Power s personal and professional life and challenges many of the myths of conventional knowledge about him Denied college because his middle class immigrant family imploded while he was still in school Power worked in New York City construction while studying for the Flying Cadet examination at night in the New York Public Library As a young pilot Power participated in some of the Army Air Corps most storied operations In the interwar years his family connections allowed Power to interact with American Wall Street millionaires and the British aristocracy Confined to training combat aircrews in the United States for most of World War II Power proved his combat leadership as a bombing wing commander by planning and leading the firebombing of Tokyo for Gen Curtis LeMay After the war Power helped LeMay transform the Air Force into the aerospace force America needed during the Cold War A master of strategic air warfare he aided in establishing SAC as the Free World s Big Stick against Soviet aggression Far from being unimaginative Power led the incorporation of the nuclear weapon the intercontinental ballistic missile the airborne alert and the Single Integrated Operational Plan into America s deterrent posture as Air Research and Development Command commander and both the vice commander and commander in chief of SAC Most importantly Power led SAC through the Cuban Missile Crisis in 1962 Even after retirement Power as a New York Times bestselling author brought his message of deterrence through strength to the nation Ziarnick points out how Power s impact may continue in the future Power s peerless but suppressed vision of the Air Force and the nation in space is recounted in detail placing Power firmly as a forgotten space visionary and role model for both the Air Force and the new Space Force To Rule the Skies is an important contribution to the history of the Cold War and beyond

Dream Missions Michel van Pelt,2017-05-24 This book takes the reader on a journey through the history of extremely ambitious large and complex space missions that never happened What were the dreams and expectations of the visionaries behind these plans and why were they not successful in bringing their projects to reality thus far As spaceflight development progressed new technologies and ideas led to pushing the boundaries of engineering and technology though still grounded in real scientific possibilities Examples are space colonies nuclear propelled interplanetary spacecraft space telescopes consisting of multiple

satellites and cannon launch systems Each project described in this book says something about the dreams and expectations of their time and their demise was often linked to an important change in the cultural political and social state of the world For each mission or spacecraft concept the following will be covered Description of the design Overview of the history of the concept and the people involved Why it was never developed and flown What if the mission was actually carried out consequences further developments etc
