Parts And Places The Structures Of Spatial Representation:

Parts and Places Roberto Casati, Achille C. Varzi, 1999 Thinking about space is thinking about spatial things The table is on the carpet hence the carpet is under the table The vase is in the box hence the box is not in the vase But what does it mean for an object to be somewhere How are objects tied to the space they occupy In this book Roberto Casati and Achille C Varzi address some of the fundamental issues in the philosophy of spatial representation Their starting point is an analysis of the interplay between mereology the study of part whole relations topology the study of spatial continuity and compactness and the theory of spatial location proper This leads to a unified framework for spatial representation understood quite broadly as a theory of the representation of spatial entities The framework is then tested against some classical metaphysical questions such as Are parts essential to their whole Is spatial co location a sufficient criterion of identity What if anything distinguishes material objects from events and other spatial entities The concluding chapters deal with applications to topics as diverse as the logical analysis of movement and the semantics of maps **Conceptual Structures: Inspiration and Application** Pascal Hitzler, 2006-06-29 This book constitutes the refereed proceedings of the 14th International Conference on Conceptual Structures ICCS 2006 held in Aalborg Denmark in July 2006 The volume presents 24 revised full papers together with 6 invited papers The papers address topics such as conceptual structures their interplay with language semantics and pragmatics formal methods for concept analysis and contextual logic modeling representation and visualization of concepts conceptual knowledge acquisition and more **The Architecture of Matter** Thomas Anand Holden, 2004 Holden presents a study of theories of the internal architecture of matter in the 17th 18th centuries He offers a synthesis of discussions by Galileo Descartes Newton and Kant amongst others and gives his own interpretation of the debate **Formal Ontology in Information Systems** Boyan Brodaric, Fabian Neuhaus, 2020-11-15 FOIS is the flagship conference of the International Association for Ontology and its Applications a non profit organization which promotes interdisciplinary research and international collaboration at the intersection of philosophical ontology linguistics logic cognitive science and computer science as well as in the applications of ontological analysis to conceptual modeling knowledge engineering knowledge management information systems development library and information science scientific research and semantic technologies in general This volume presents the 17 papers accepted for the 11th Formal Ontology in Information Systems conference FOIS 2020 These papers cover a broad range of topics and are organized into 5 groups Foundations is dedicated to the general ontological decisions providing a foundation for any ontology both from a philosophical perspective and with an emphasis on applications Social Entities is dedicated to the ontological analysis and formalization of various social entities including secrets legal theories decisions kinship and cultural heritage The papers in Intentionality and Embodiment analyze aspects of an agent's intentions beliefs and desires as well as the embodiment of functional relations The section on Parts and Wholes is dedicated to mereology as well as the mereological analysis of certain types of entities e.g. pluralities

Spatial Representation Barbara Landau,James E.

Hoffman,2012-08-23 Our experience of the spatial world is a unitary one we perceive objects and layouts we remember them and act on them and we can even talk about them with ease Despite this impression of seamlessness spatial representations in human adults appear to be specialized in domain dependent manner engaging different properties and computational mechanisms for different functions In this book the authors present evidence that this domain specific specialization in cognitive function emerges early in development and is reflected in patterns of breakdown that occur under genetic defect The authors focus on spatial representation in children and adults with Williams syndrome a relatively rare genetic syndrome that gives rise to an unusual profile of severely impaired spatial representation together with spared language Results from a variety of spatial domains including object representation motion perception action navigation and spatial language appear to display a strikingly uneven profile of sparing and deficit within spatial representations consistent with the idea that specialization of function drives development and breakdown These findings raise a crucial question Can specific genes target specific aspects of cognitive structure Looking deeper into the patterns of performance across spatial domains the book explores the notion that understanding patterns of normal development across domains is crucial to understanding unusual development Using insights from normal development the authors propose a speculative hypothesis that explains the

emergence of the William syndrome profile and how complex cognitive outcomes can arise from the deletion of a small set of genes Spatial Cognition VI. Learning, Reasoning, and Talking about Space Christian Freksa, Nora S. Newcombe, Peter Gärdenfors, Stefan Wölfl, 2008-09-10 This book constitutes the refereed proceedings of the International Conference on Spatial Cognition Spatial Cognition 2008 held in Freiburg Germany in September 2008 The 27 revised full papers presented together with 3 invited lectures were carefully reviewed and selected from 54 submissions The papers are organized in topical sections on spatial orientation spatial navigation spatial learning maps and modalities spatial communication spatial language similarity and abstraction concepts and reference frames as well as spatial modeling and spatial reasoning

Encyclopedia of Perception E. Bruce Goldstein, 2010 Because of the ease with which we perceive many people see perception as something that just happens However even seemingly simple perceptual experiences involve complex underlying mechanisms which are often hidden from our conscious experience These mechanisms are being investigated by researchers and theorists in fields such as psychology cognitive science neuroscience computer science and philosophy A few examples of the questions posed by these investigations are What do infants perceive How does perception develop What do perceptual disorders reveal about normal functioning How can information from one sense such as hearing be affected by information from another sense such as vision How is the information from all of our senses combined to result in our perception of a coherent environment What are some practical outcomes of basic research in perception These are just a few of the questions this encyclopedia will consider as it presents a comprehensive overview of the field of perception for students researchers and professionals in psychology the cognitive sciences neuroscience and related medical disciplines such as neurology and ophthalmology **ECAI 2014** T.
