Kogan,2020-07-20 This book presents research using high resolution operational satellite data for monitoring and assessing numerically how to reduce the area and intensity of malaria outbreaks Satellite data and imageries a powerful and effective tool for malaria monitoring and reduction of the number of affected people as it bypasses the limitations imposed by the dearth of near the ground weather data in many malaria prone areas With this in mind this volume provides readers with In depth information in monitoring signs of malaria from operational polar orbiting satellites Examples of country specific models for predicting malaria area 1 and 4 km² resolution and intensity Information on the how the effects of climate change on malaria outbreak area and intensity can be monitored A new Vegetation Health VH methodology to estimate vegetation moisture temperature and moisture temperature conditions as indicators of malaria vector activity Advice to users on the application of VH technology for early assessments of malaria area intensity and risk level Remote Sensing for Malaria is intended for an audience of public health practitioners environmentalists and students and researchers working in spatial epidemiology and disease prevention

Re-entry Systems Erwin Mooij,2024-12-25 This book explains and describes re entry systems for both the Earth and other planets It provides sufficient information for readers to perform entry mission analysis for different bodies in the Solar System Not only does it discuss re entry flight mechanics but also addresses relevant subsystems and fields enabling readers to put the information into perspective The book begins with a complete description of planetary environments including atmosphere gravity fields and the shape of the primary body After a detailed discussion

of planar flight mechanics it then moves on to discuss guidance navigation and control entry descent and landing systems as well as thermal protection systems It uses examples throughout the text enabling the theory to be linked to practical applications Ideal for those wanting an updated thorough discussion of re entry systems this book is suitable for students and researchers

Remote Sensing Land Surface Changes Felix Kogan,2023-02-22 This book discusses the detrimental consequences of climate related land changes over a 40 year period between 1981 and 2020 and focuses on how climate warming is deteriorating the agricultural system due to excessive heat lack of moisture and more intensive and widespread droughts leading to a reduction of agricultural production Most of the existing literature on the unfavourable consequences of global warming for land are based on a relatively short period of weather station data covering local land areas with limited networks and monitoring parameters These concerns have led to the use of satellite data whose measurements are controlled by such vegetation characteristics as chlorophyll carotenoids moisture contents in the plants and temperature inside the vegetation community Therefore the discussion of this book is completely based on high resolution global land surface measurements by the sensors on the National Oceanic and Atmospheric Administration s NOAA operational afternoon polar orbiting satellites The book also focuses on understanding climate change impacts on land changes where humans are living and combines biophysically grounded methods and the 40 year data to develop models for monitoring large scale Earth warming impacts on land and for timely prediction of climate consequences for humans These 40 year trends in land characteristics will help to better inform the assessment of potential changes in the future and how to reach human sustainability The book will of interest to scientists using satellite remote sensing to track climate change impacts on land over time as well as students and researchers in climatology and environmental sustainability
