The International Conference on Machine Learning and Data Mining MLDM is the third meeting in a series of biennial events which started in 1999 organized by the Institute of Computer Vision and Applied Computer Sciences IBAI in Leipzig MLDM began as a workshop and is now a conference and has brought the topic of machine learning and data mining to the attention of the research community Seventy ve papers were submitted to the conference this year The program committee worked hard to select the most progressive research in a fair and competent review process which led to the acceptance of 33 papers for presentation at the conference The 33 papers in these proceedings cover a wide variety of topics related to machine learning and data mining The two invited talks deal with learning in case based reasoning and with mining for structural data The contributed papers can be grouped into nine areas support vector machines pattern decision trees clustering classification and retrieval case based reasoning Bayesian models and methods association rules and applications We would like to express our appreciation to the reviewers for their precise and highly professional work We are grateful to the German Science Foundation for its support of the Eastern European researchers We appreciate the help and understanding of the editorial staff at Springer Verlag and in particular Alfred Hofmann

who supported the publication of these proceedings in the LNAI series Last but not least we wish to thank all the speakers and participants who contributed to the success of the conference

Pattern Recognition Algorithms for Data Mining

Sankar K. Pal, Pabitra Mitra, 2004-05-27 Pattern Recognition Algorithms for Data Mining addresses different pattern recognition PR tasks in a unified framework with both theoretical and experimental results Tasks covered include data condensation feature selection case generation clustering classification and rule generation and evaluation This volume presents various theories methodologies and algorithms using both classical approaches and hybrid paradigms The authors emphasize large datasets with overlapping intractable or nonlinear boundary classes and datasets that demonstrate granular computing in soft frameworks Organized into eight chapters the book begins with an introduction to PR data mining and knowledge discovery concepts The authors analyze the tasks of multi scale data condensation and dimensionality reduction

then explore the problem of learning with support vector machine SVM They conclude by highlighting the significance of granular computing for different mining tasks in a soft paradigm

Machine Learning and Data Mining in Pattern Recognition Petra Perner, Maria Petrou, 1999-09-08 The field of machine learning and data mining in connection with pattern recognition enjoys growing popularity and attracts many researchers Automatic pattern recognition systems have proven successful in many applications The wide use of these systems depends on their ability to adapt to changing environmental conditions and to deal with new objects This requires learning capabilities on the parts of these systems The exceptional attraction of learning in pattern recognition lies in the specific data themselves and the different stages at which they get processed in a pattern recognition system This results a specific branch within the field of machine learning At the workshop were presented machine learning approaches for image pre processing image segmentation recognition and interpretation Machine learning systems were shown on applications such as document analysis and medical image analysis Many databases are developed that contain multimedia sources such as images measurement protocols and text documents Such systems should be able to retrieve these sources by content That requires specific retrieval and indexing strategies for images and signals Higher quality database contents can be achieved if it were possible to mine these databases for their underlying information Such mining techniques have to consider the specific characteristic of the image sources The field of mining multimedia databases is just starting out We hope that our workshop can attract many other researchers to this subject

Machine Learning and Data Mining in Pattern Recognition Petra Perner, 2001-07-16 This book constitutes the refereed proceedings of the Second International Workshop on Machine Learning and Data Mining in Pattern Recognition MLDM 2001 held in Leipzig Germany in July 2001 The 26 revised full papers presented together with two invited papers were carefully reviewed and selected for inclusion in the proceedings The papers are organized in topical sections on case based reasoning and associative memory rule induction and grammars clustering and conceptual clustering data mining on signals images and spatio temporal data nonlinear function learning and neural net based learning learning for handwriting recognition statistical and evolutionary learning and content based image retrieval

Machine Learning and Data Mining in Pattern Recognition Petra Perner, 2009-07-21 There is no royal road to science and only those who do not dread the fatiguing climb of its steep paths have a chance of gaining its luminous summits Karl Marx A Universal Genius of the 19th Century Many scientists from all over the world during the past two years since the MLDM 2007 have come along on the stony way to the sunny summit of science and have worked hard on new ideas and applications in the area of data mining in pattern recognition Our thanks go to all those who took part in this year s MLDM We appreciate their submissions and the ideas shared with the Program Committee We received over 205 submissions from all over the world to the International Conference on Machine Learning and Data Mining MLDM 2009 The Program Committee carefully selected the best papers for this year s program and gave detailed comments on each submitted paper There were 63 papers selected for oral presentation and 17

papers for poster presentation The topics range from theoretical topics for classification clustering association rule and pattern mining to specific data mining methods for the different multimedia data types such as image mining text mining video mining and Web mining Among these topics this year were special contributions to subtopics such as attribute discretization and data preparation novelty and outlier detection and distances and similarities Data Analysis and Pattern Recognition in Multiple Databases Animesh Adhikari, Jhimli Adhikari, Witold Pedrycz, 2013-12-09 Pattern recognition in data is a well known classical problem that falls under the ambit of data analysis As we need to handle different data the nature of patterns their recognition and the types of data analyses are bound to change Since the number of data collection channels increases in the recent time and becomes more diversified many real world data mining tasks can easily acquire multiple databases from various sources In these cases data mining becomes more challenging for several essential reasons We may encounter sensitive data originating from different sources those cannot be amalgamated Even if we are allowed to place different data together we are certainly not able to analyze them when local identities of patterns are required to be retained Thus pattern recognition in multiple databases gives rise to a suite of new challenging problems different from those encountered before Association rule mining global pattern discovery and mining patterns of select items provide different patterns discovery techniques in multiple data sources Some interesting item based data analyses are also covered in this book Interesting patterns such as exceptional patterns icebergs and periodic patterns have been recently reported The book presents a thorough influence analysis between items in time stamped databases The recent research on mining multiple related databases is covered while some previous contributions to the area are highlighted and contrasted with the most recent developments Machine Learning and Data Mining in Pattern Recognition Petra Perner, Atsushi Imiya, 2005-08-25 We met again in front of the statue of Gottfried Wilhelm von Leibniz in the city of Leipzig Leibniz a famous son of Leipzig planned automatic logical inference using symbolic computation aimed to collate all human knowledge Today artificial intelligence deals with large amounts of data and knowledge and finds new information using machine learning and data mining Machine learning and data mining are irreplaceable subjects and tools for the theory of pattern recognition and in applications of pattern recognition such as bioinformatics and data retrieval This was the fourth edition of MLDM in Pattern Recognition which is the main event of Technical Committee 17 of the International Association for Pattern Recognition it started out as a workshop and continued as a conference in 2003 Today there are many international meetings which are titled machine learning and data mining whose topics are text mining knowledge discovery and applications This meeting from the first focused on aspects of machine learning and data mining in pattern recognition problems We planned to reorganize classical and well established pattern recognition paradigms from the viewpoints of machine learning and data mining Though it was a challenging program in the late 1990s the idea has inspired new starting points in pattern recognition and effects in other areas such as cognitive computer vision Machine Learning and Data Mining in Pattern
